1 Executive Summary

America's animal feed and pet food manufacturing industries are an important driver of economic activity throughout the nation. Through sales to and purchases from many other industries, animal feed and pet food manufacturers contribute greatly to both their local economies and the national economy. Given generally increasing worldwide demand for protein and pet ownership rates, it is expected that these industries will continue to thrive and contribute to the economic well-being of the United States.

In 2022, the American Feed Industry Association (AFIA) commissioned Decision Innovation Solutions (DIS), an economic research and analysis firm, to conduct an economic analysis of the U.S. animal feed and pet food manufacturing industries' contribution to the economy. This study was commissioned as an update to the original 2016 economic contribution study commissioned by the Institute for Feed Education and Research (IFEEDER). The animal feed and pet food industries are estimated to contribute the following **directly** to the national economy in 2023:

- **\$18.8 billion** in value added, including **\$6.9 billion** in labor income
- **80,344** jobs
- **\$85.2 billion** in output (sales)
- **\$3.7 billion** in local, state, and federal taxes

Including indirect and induced effects, the **total** contribution of the U.S. animal feed and pet food manufacturing industries is:

- **\$98.4 billion** in value added, including **\$55.0 billion** in labor income
- **759,596** jobs
- **\$267.1 billion** in output
- **\$18.5 billion** in local, state, and federal taxes

This study demonstrates the continued importance of the **5,124** animal feed mills and **523** pet food facilities in the U.S., including those listed by the Food and Drug Administration (FDA) as licensed medicated feed mills and non-licensed feed mills, across the United States.

State and Congressional District Contribution Highlights

In addition to estimating the industries' national economic contribution, the industries' economic contribution was calculated at the federal congressional district and state levels. While the results for these study areas are included in greater detail later in Appendix C, a few highlights are presented here. Six states consistently rank at or near the top of all reported economic measures: California, Iowa, Kansas, Missouri, Pennsylvania, and Texas. Each of these states are home to anywhere from 18 pet food manufacturers in Iowa to 59 in Pennsylvania, and from 132 animal feed mills in California to nearly 650 in Texas. Together, the animal feed and pet food manufacturers in these six states contribute the following total to the economy:

- **\$38.5 billion** in value added, including **\$21.2 billion** in labor income
- **290,085** jobs
- **\$103.5 billion** in output (sales)
- **\$7.2 billion** in local, state, and federal taxes

Five congressional districts consistently rank at or near the top of all reported economic measures: Kansas-2, Texas-13, Iowa-4, Nebraska-3, and Missouri-7. These congressional districts are all located in areas of high livestock or poultry production and are home to many feed mills and/or pet food manufacturing facilities. The animal feed and pet food industries in these five congressional districts contribute the following total to the economy:

- **\$11.5 billion** in value added, including **\$6.1 billion** in labor income
- **83,925** jobs
- **\$30.7 billion** in output (sales)
- **\$1.9 billion** in local, state, and federal taxes

Comparison to Previous Study

This study is an update to a previous analysis of the economic contribution of the animal feed and pet food manufacturing industry in 2016. While there are some minor changes in methodology between the two analyses, the results are largely comparable. A summary comparison of the total and direct contribution values of the animal feed and pet food manufacturing industries is shown below.

Comparison to Previous Study - Total Results						
	Labor Income		Value Added		Output	
	Employment	(\$B)	(\$B)	(\$B)	(\$B)	(\$B)
2023 Study	759,596	\$ 55.0	\$ 98.4	\$ 267.1		
2016 Study	944,227	\$ 55.9	\$ 102.0	\$ 297.1		
Difference	(184,631)	\$ (0.9)	\$ (3.6)	\$ (30.0)		

Comparison to Previous Study - Direct Results						
	Labor Income		Value Added		Output	
	Employment	(\$B)	(\$B)	(\$B)	(\$B)	(\$B)
2023 Study	80,344	\$ 6.9	\$ 18.8	\$ 85.2		
2016 Study	60,777	\$ 4.6	\$ 14.0	\$ 88.1		
Difference	19,567	\$ 2.3	\$ 4.9	\$ (2.9)		

While total contribution values decreased across all four indicators of economic activity, the direct contribution increased in terms of employment, labor income, and value added, with only a minor decrease in output. This shows that animal feed and pet food manufacturing have continued to grow. Underlying relationships between industries related to animal and pet food manufacturing have changed since the previous analysis, resulting in lower indirect and induced effects.

2 Background on the Animal Food Industry

2.1 Summary Statistics and Trends

The U.S. is home to many food-producing animals and pets that the animal food industries feed. Major agricultural animals include broilers, turkeys, egg-laying hens (layers), hogs, dairy cows, beef cows, horses, aquaculture, sheep, and goats. The U.S. has fed over 130 million animal units every year since 2017 (Figure 1). Total animal units have declined slightly since 2019 but remain well above levels seen prior to 2018.

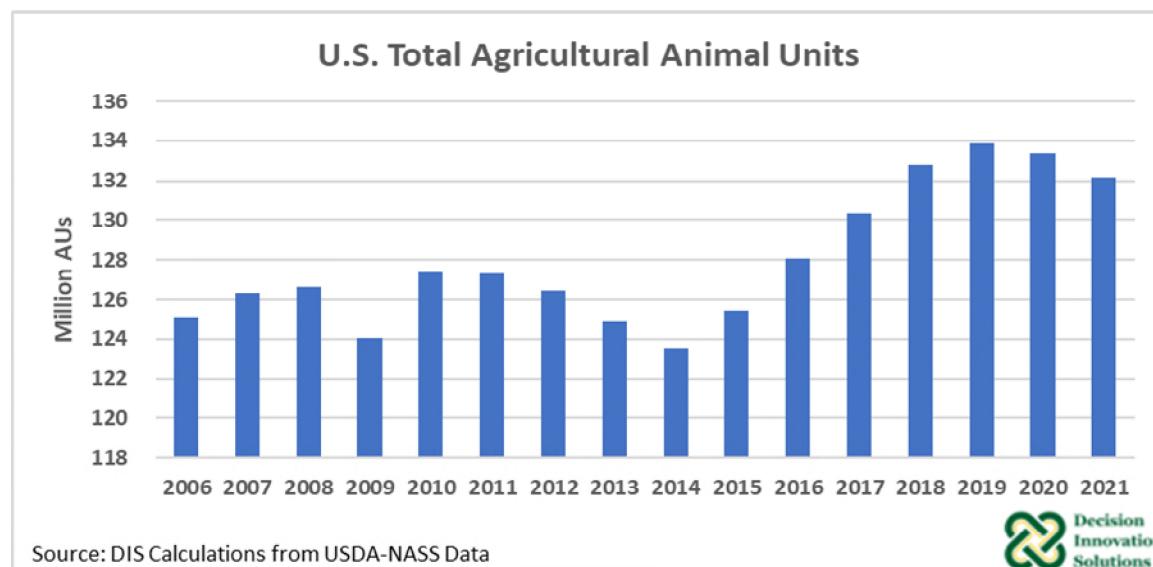

Figure 1. U.S. Total Agricultural Animal Units

Pets are also common in the U.S. While the U.S. contains many kinds of pets, cats and dogs remain the most common. The American Veterinary Medical Association (AVMA) estimates there were 86 million dogs and 62 million cats in the U.S. in 2020 (AVMA, 2022). Both dog and cat numbers are up compared to estimates of 77 million dogs and 58 million cats in 2017 (AVMA, 2017-2018).

2.2 Feed Mills

Feed mills locate themselves in a way to best serve their customers and source their inputs, while minimizing transportation costs, including both the cost of moving feed inputs (e.g., grains and oilseeds) to their facilities and the cost of moving products to their customers. With these considerations in mind, it becomes clear why feed mills are more concentrated in the Midwest, and in general eastern portions of the state. These regions have higher crop production and are more densely populated with livestock.

Figure 2 represents zip codes which have at least one feed mill across the United States. The data is sourced from the list of licensed and non-licensed feed mills maintained by the U.S. Food and Drug Administration (FDA).

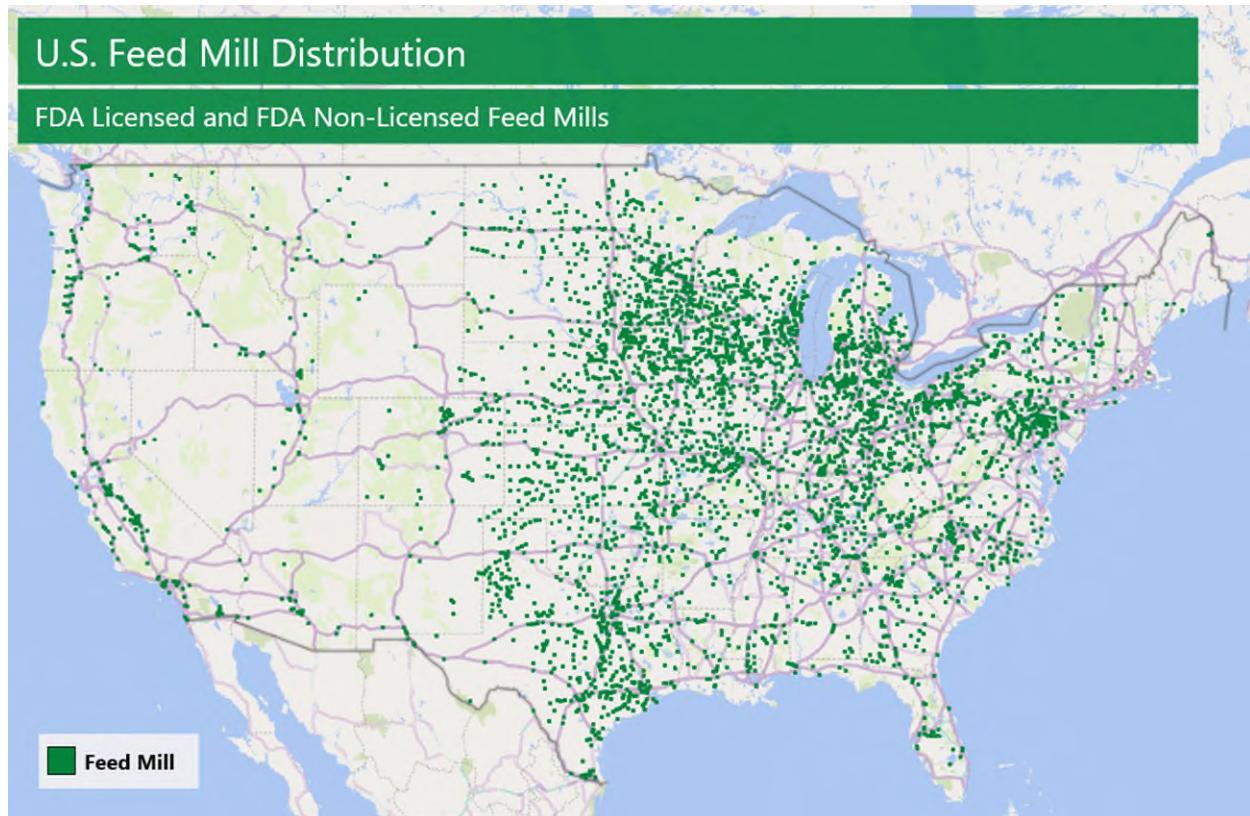

Figure 2. Zip Codes with at Least One Feed Mill

Table 1 contains a state-by-state breakdown of feed mills in 2017 and 2022. In 2022, there were 5,124 feed mills in the U.S., down from 5,687 in 2017. The number of feed mills declined in most states except for North Dakota, Utah, Maryland, Colorado, Montana, and Connecticut which saw small increases.

In both 2017 and 2022, the five states with the most feed mills were Texas, Iowa, Minnesota, Wisconsin, and Pennsylvania. These states saw declines in the number of feed mills between 2017 and 2022.

Table 1. U.S. Feed Mills by State

U.S. Feed Mills by State							
State	2017	2022	Change	State	2017	2022	Change

2.3 Pet Food Manufacturing Facilities

Besides livestock, the U.S. animal food industry also produces pet food. Figure 3 maps all U.S. zip codes with at least one pet food manufacturing facility. There are a total of 523 facilities in the U.S. This data is also sourced from the list of pet food facilities maintained by the FDA.

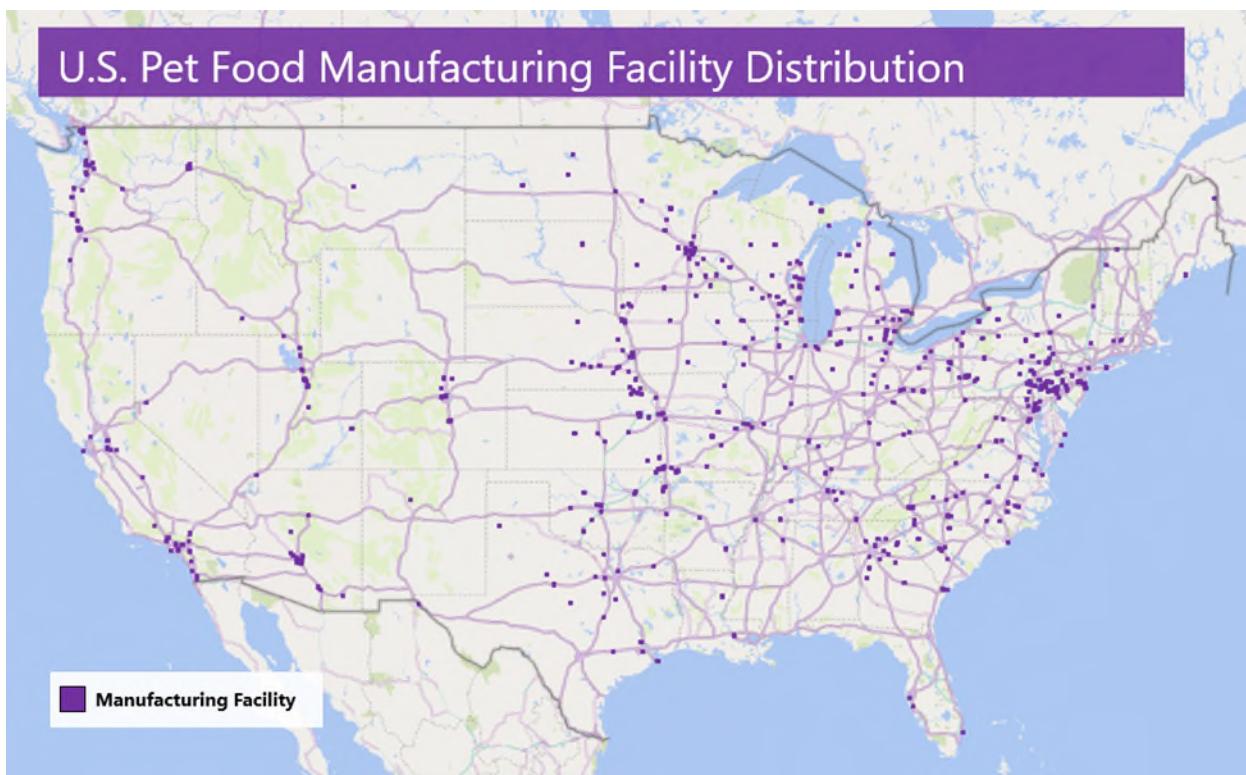

Figure 3. Zip Codes with at Least One Pet Food Manufacturing Facility

A state-by-state breakdown of pet food manufacturing facilities in 2017 and 2022 is shown in Table 2. From 2017 to 2022 the number of pet food manufacturing facilities increased from 514 to 523. Changes were mixed between states, with 17 states gaining facilities, 16 states losing facilities, and 17 states keeping the same number of facilities.

The five states with the most pet food manufacturing facilities in 2022 were Pennsylvania (59), Michigan (33), Wisconsin (28), Nebraska (27), and Washington (26). Pennsylvania retained the most facilities even after losing 13. Michigan lost one facility, while the remaining top five states all saw increases. Minnesota and California were in the top five in 2017, but lost four and five facilities respectively, moving them out of the top five in 2022.

Table 2. U.S. Pet Food Manufacturing Facilities by State

U.S. Pet Food Manufacturing Facilities by State							
State	2017	2022	Change	State	2017	2022	Change

2.4 Animal Food Ingredient Use Summary

The U.S. uses 554.1 million tons of ingredients in its animal feeds and pet foods. Of this amount, 547.7 million tons are for animal production and 6.4 million tons of ingredients are for pet foods. (see Table 3¹).

Forages make up 284.81 million tons of the feed ingredients. The remaining 267.43 million tons of ingredients are processed through commercial feed mills, on-farm mills, and pet food manufacturing

¹ Several methodology changes are incorporated into this current estimate of U.S. feed ingredient use by species compared to the Animal Feed/Food Consumption and COVID-19 Impact Analysis conducted by DIS for IFEEDER in December 2020. First, forages were added to the calculations and nutrients supplied by grazing are also considered for ruminants. Second, broth, water and fresh/frozen meats are not included in the pet food calculations but were here.

facilities². Corn makes up the largest feed ingredient, accounting for 56.23% of the feed ingredients processed. Soybean meal is the second most used ingredient accounting for 14.86% of the processed feed. Corn dried distillers grains (DDGs) are the third most used ingredient accounting for 9.51% of the processed feeds. Plant protein meals other than soybean meal account for 6.13% of the processed feeds, other grains make up 4.65% of the processed feeds, fats and oils make up 2.91% of the processed feeds, animal protein meals account for 1.77% of processed feeds, synthetic amino acids are 0.21% of processed feeds, and other ingredients make up 3.73% of processed feeds. Beef cattle production consumes the largest amount of corn, whereas broiler production consumed the most soybean meal (see Table 3).

Table 3. U.S. Feed Ingredient Usage by Species, 2021

U.S. Feed Ingredient Usage by Species, 2021 (Short Tons)												
Species	Corn	Other Grains	Soybean Meal	DDGs	Other Plant Protein Meals	Animal Protein Meals	Meat, Poultry & Fish**	Fats & Oils	Amino Acids	Other	Forages & Fiber	Total

Source: Results of DIS Ration Cost Optimization (RCO) Model.

*For dairy, the RCO model currently balances based on total protein requirements. **Meat, Poultry & Fish data is from the DIS 2020 AFIA Pet Study.

Table 4 provides a summary of the animal feed ingredient use by state in 2021. The top three feed ingredients (corn, soybean meal and DDGs) are broken out separately. The rest of the ingredients are categorized into groups as *Other Grains*, *Other Plant Protein Meals*, *Animal Proteins Product Meals*, *Fats & Oils*, *Amino Acids*, *Other Ingredients* (e.g. vitamins, minerals, salt, enzymes, microbials, etc.), and *Forages & Fiber* ingredients³.

² Meat, poultry & fish are processed within the manufacturing of pet foods but not normally considered as part of processed feeds. These are “fresh and frozen meats”

³ For this report, the following aggregations were used:

Soybean meal: Soybean meal and soybean hulls

Other grains: Barley, grain sorghum, hominy feed, millet, oats, rye, wheat, wheat midds, and wheat flour.

Other plant protein meals: Alfalfa meal, corn gluten feed, corn gluten meal, canola meal, cottonseed meal, cottonseed, sunflower meal, rice mill feed, non-corn brewers' grains, whole soybeans, bakery byproduct feed, and other miscellaneous plant-based byproduct feeds.

Animal protein product meals: Blood meal, feather meal, fish meal, meat and bone meal, meat meal, and poultry byproduct meals.

Fats & oils: Canola oil, crude corn oil, distillers corn oil, choice white grease, inedible tallow, poultry fat, soybean oil, used cooking oil, and yellow grease.

Forages and fibers: Alfalfa hay, almond hulls, citrus pulp, corn silage, corn stalks, legume silage, other hay, peanut hulls, sugar beet pulp, sorghum silage, and wheat straw.

Other ingredients: Dicalcium phosphate, limestone, minerals, molasses, potassium chloride, potato tubers, potato pulp, potato peels, phytase, salt, sodium bicarbonate, and vitamins.

Table 4. Animal Feed Ingredient Use by State Summary, 2021

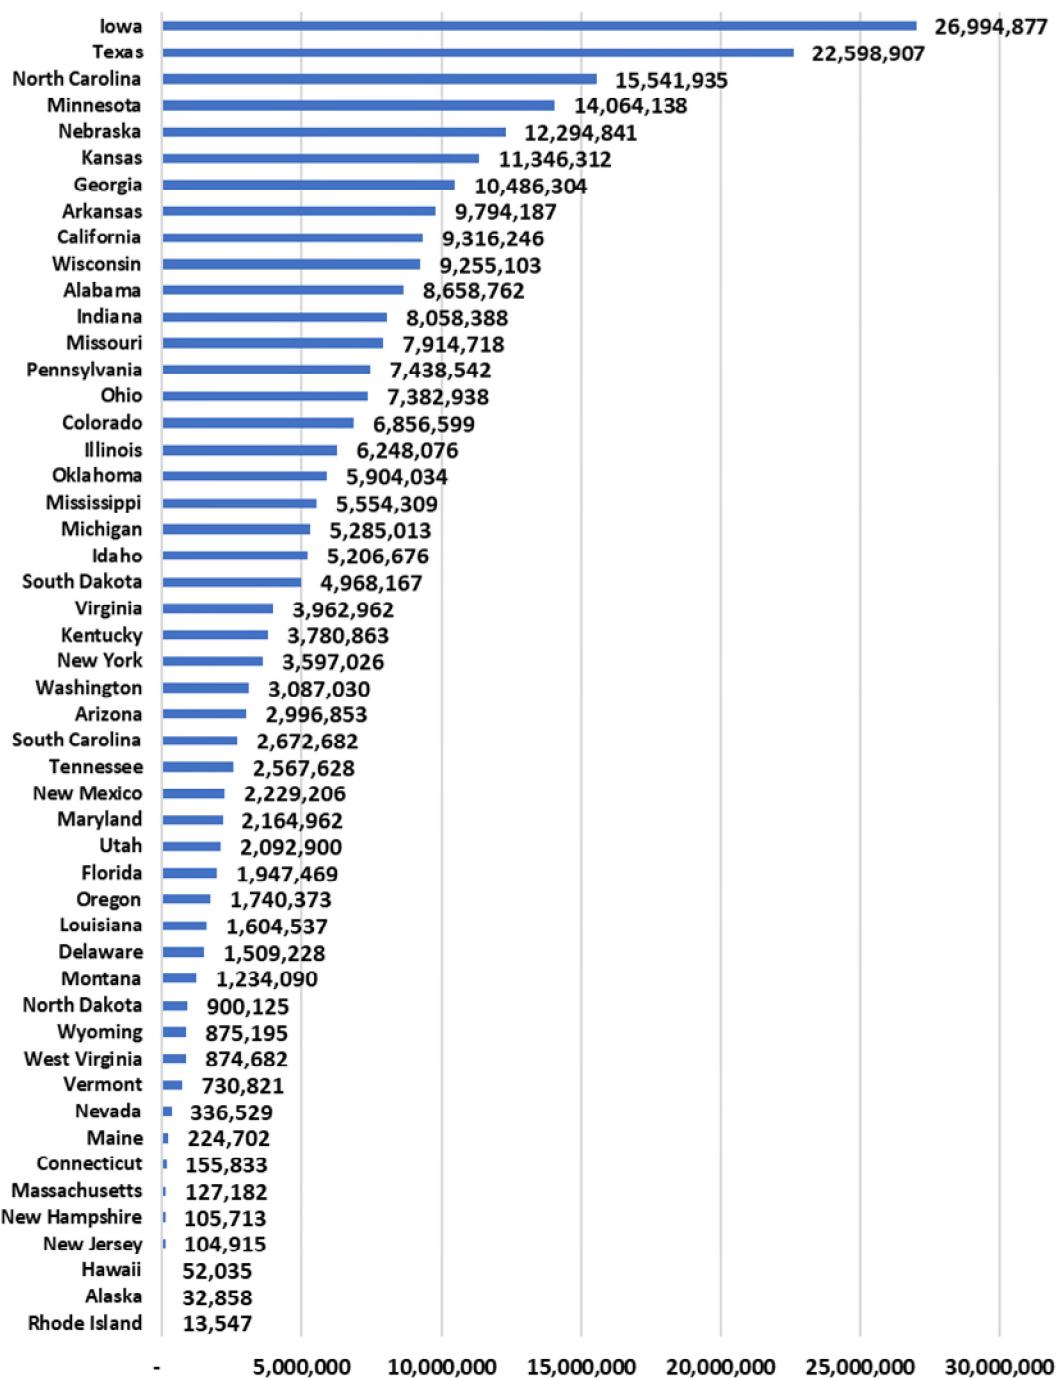

Animal Feed Ingredient Use by State, 2021 (Short Tons)											
States	Corn	Other Grains	Soybean Meal	DDGs	Other Plant Protein Meals	Animal Protein Meals	Fats & Oils	Amino Acids	Other	Forages & Fiber	Total

Feed processing occurs in every state. Iowa leads the nation in the quantity of feed that is processed, followed by Texas, North Carolina, Minnesota, and Nebraska. There are seven states that handle more than 10 million tons of feed ingredients through their feed mills. Fourteen states handle between 5 million tons and 10 million tons of feed ingredients, 16 states handle between 1 million tons to 5 million tons of feed ingredients, and 13 states handle less than a million tons of feed ingredients per year through their feed mills (Figure 4).

Total Processed Feeds by State (Short Tons)

Figure 4. Total Processed Feeds by State

Texas is the leading state that handles pet food, followed by California, Florida, New York, and Ohio. There are four states that handle more than 200,000 tons of pet food, 12 states that handle 100,000 tons to 200,000 tons of pet food, 14 states that handle 50,000 tons to 100,000 tons of pet food, and 20 states handle less than 50,000 tons of pet food. (Figure 5 and Table 6).

2.5 Pet Food Ingredient Use Summary

Table 5 provides a summary of ingredient usage for pet foods. Meats, poultry and fish products are the number one category of ingredients used in pet foods followed by animal proteins, corn, other plant proteins, soybean meal, other grains, fats and oils, other ingredients, and DDGs.

Table 5. U.S. Pet Food Ingredient Usage Summary, 2021

U.S. Pet Food Ingredient Usage by Species, 2021 (Short Tons)											
Species	Corn	Other Grains	Soybean Meal	DDGs	Other Plant Protein Meals	Animal Protein Meals	Meat, Poultry & Fish*	Fats & Oils	Other	Forages & Fiber	Total
Pets (U.S. Total)	1,429,048	414,090	479,739	2,964	506,939	1,527,575	1,854,475	142,525	34,857	320	6,392,532

3 Methodology

The following economic contribution study was conducted using a combination of IMPLAN, Microsoft Excel, U.S. Census datasets and geographic files, and GIS software. IMPLAN is an input-output model used to understand industry relationships and conduct economic assessments for specified local economies. IMPLAN datasets are constructed annually and are derived from many different sources, including the U.S. Bureau of Labor Statistics (BLS), the U.S. Bureau of Economic Analysis (BEA), the U.S. Bureau of Economic Analysis Benchmark Input-Output Account of the U.S., the BEA output estimates, the U.S. Census Bureau's economic censuses and surveys, the U.S. Department of Agriculture's census, and more.

Within IMPLAN, the effects of an economic impact or contribution event are expressed in terms of direct, indirect, and induced effects. These different effect types are defined as follows:

- **Direct Effects** – The economic activity directly attributable to the industry under analysis; in this study, the production of animal feed and pet food from a variety of inputs
- **Indirect Effects** – The effects of local inter-industry spending throughout the supply chain, for example, the seed, equipment, fertilizer, and other inputs used by a farmer to produce corn for a feed mill
- **Induced Effects** – The results of employees of the directly and indirectly affected industries spending their income throughout the local economy
- **Total Effect** – The sum of direct, indirect, and induced effects

The 2021 IMPLAN data package, which is the most recent data available, was used for this analysis. Using inflation factors inherent in the IMPLAN modeling system, all numbers within these sectors were brought forward from 2021 to 2023. The economic contribution of the animal feed and pet food manufacturing industries at the state level was analyzed using Multi-Region Input-Output (MRIO) analysis.⁴ This type of analysis allows the contribution of an industry in one study area to affect industries in neighboring regions through indirect and induced effects.

As the current (2023) federal congressional districts are not available in the 2021 IMPLAN dataset, they were created using the “custom region” feature in IMPLAN. These congressional districts were assembled by combining ZIP codes, according to U.S. Census geographic files and spatial analysis conducted using GIS software. The contribution analysis at the congressional district level was performed as a standalone region (non-MRIO) analysis, and the results were balanced to match their respective state-level economic contribution results.

3.1 Economic Impact Study Versus Economic Contribution Study

This study is called an “economic contribution study,” which looks at understanding the animal feed and pet food manufacturing and related industries’ *current* contribution to the respective study area economies (e.g., congressional district, state and national levels). This is a key difference from what is traditionally termed an “economic impact study,” which attempts to understand the economic impacts of a *change* occurring within an economy, such as when a business or industry enters or leaves an area or the expansion or contraction of an existing business or industry. With an economic contribution

⁴ For more information on MRIO analysis in IMPLAN: <https://support.implan.com/hc/en-us/articles/115009713448-MRIO-Introduction-to-Multi-Regional-Input-Output-Analysis>

study, the sum of individual industry estimates will not differ from the total of what exists in a given study area; in other words, any double counting of an industry's economic activity is avoided.

This analysis—using an economic contribution model—is an effort to evaluate the existing industry structure within an existing economy, instead of the sudden “shocks” to an economy, which an economic impact study would assess.

3.2 IMPLAN: Helping Define the Animal Feed and Pet Food Manufacturing and Related Industries

When completing an economic contribution study, there are generally questions as to how far up and down the value chain a particular industry should be assessed. Outlined below is the process used in this study for defining the animal feed and pet food manufacturing industries.

The IMPLAN modeling system contains 546 industries, which are aggregations of all North American Industry Classification System (NAICS) codes. Within the 546 industries are many that deal with crops and livestock and the processing of these commodities into other products. The following industries were most appropriate for inclusion in this economic contribution analysis:

- Sector 65, Dog and Cat Food Manufacturing
- Sector 66, Animal Feed Manufacturing

Note that the input industries for animal feed and pet food manufacturing (such as grain and soybean farming) are included via the indirect effects attributed to an activity in the above sectors. Wholesale and retail industries are not included in this analysis in order to avoid overstating the true economic value of the animal feed and pet food manufacturing industries.

4 Results

4.1 Definitions

The results of this economic contribution study are reported using the following economic measures:

- **Output:** The broadest measure of economic activity – also commonly referred to as “sales.” Output refers to the total value of all sales of an industry within a study area without any deductions for the cost or origination of inputs that were used in the production process.
- **Value Added:** A component of output, this measure includes the total sales minus the costs of inputs. Alternatively, value added is calculated as the sum of labor income (further defined below), taxes on production and imports, and other property-type income.
- **Labor Income:** A subset of value added, includes the sum of employee compensation (i.e., wages and benefits) and proprietor income (i.e., income of self-employed workers).
- **Employment (Jobs):** A measure of part- and full-time job positions, including contract workers, without regard to their full-time equivalence. Since it is not representative solely of full-time positions or full-time equivalents, care must be made when drawing comparisons to other measures of employment.
- **Taxes:** The net sum of taxes paid at the local, state and federal levels net of subsidies (subsidies are included in this total as a negative tax).

4.2 Combined National and State Results

In 2023, the U.S. animal feed and pet food manufacturing industries are estimated to **directly** contribute the following to the national economy:

- \$18.8 billion in value added, including \$6.9 billion in labor income
- 80,344 jobs
- \$85.2 billion in output (sales)
- \$3.7 billion in local, state, and federal taxes

Including indirect and induced effects, the **total** contribution of the U.S. animal feed and pet food manufacturing industries grows to:

- \$98.4 billion in value added, including \$55.0 billion in labor income
- 759,596 jobs
- \$267.1 billion in output
- \$18.5 billion in local, state, and federal taxes

4.2.1 Jobs

At the national level, the animal feed and pet food manufacturing industries contribute an estimated 759,596 full- and part-time jobs within and related to these industries in 2023. Figure 6 shows the estimated total job contribution by state. At the state level, Missouri is the leading state in this category with an estimated jobs contribution of 54,352, followed by California, Texas, Iowa, and Pennsylvania. Each of these five states are home to at least 18 pet food manufacturing facilities and at least 132 animal feed mills.

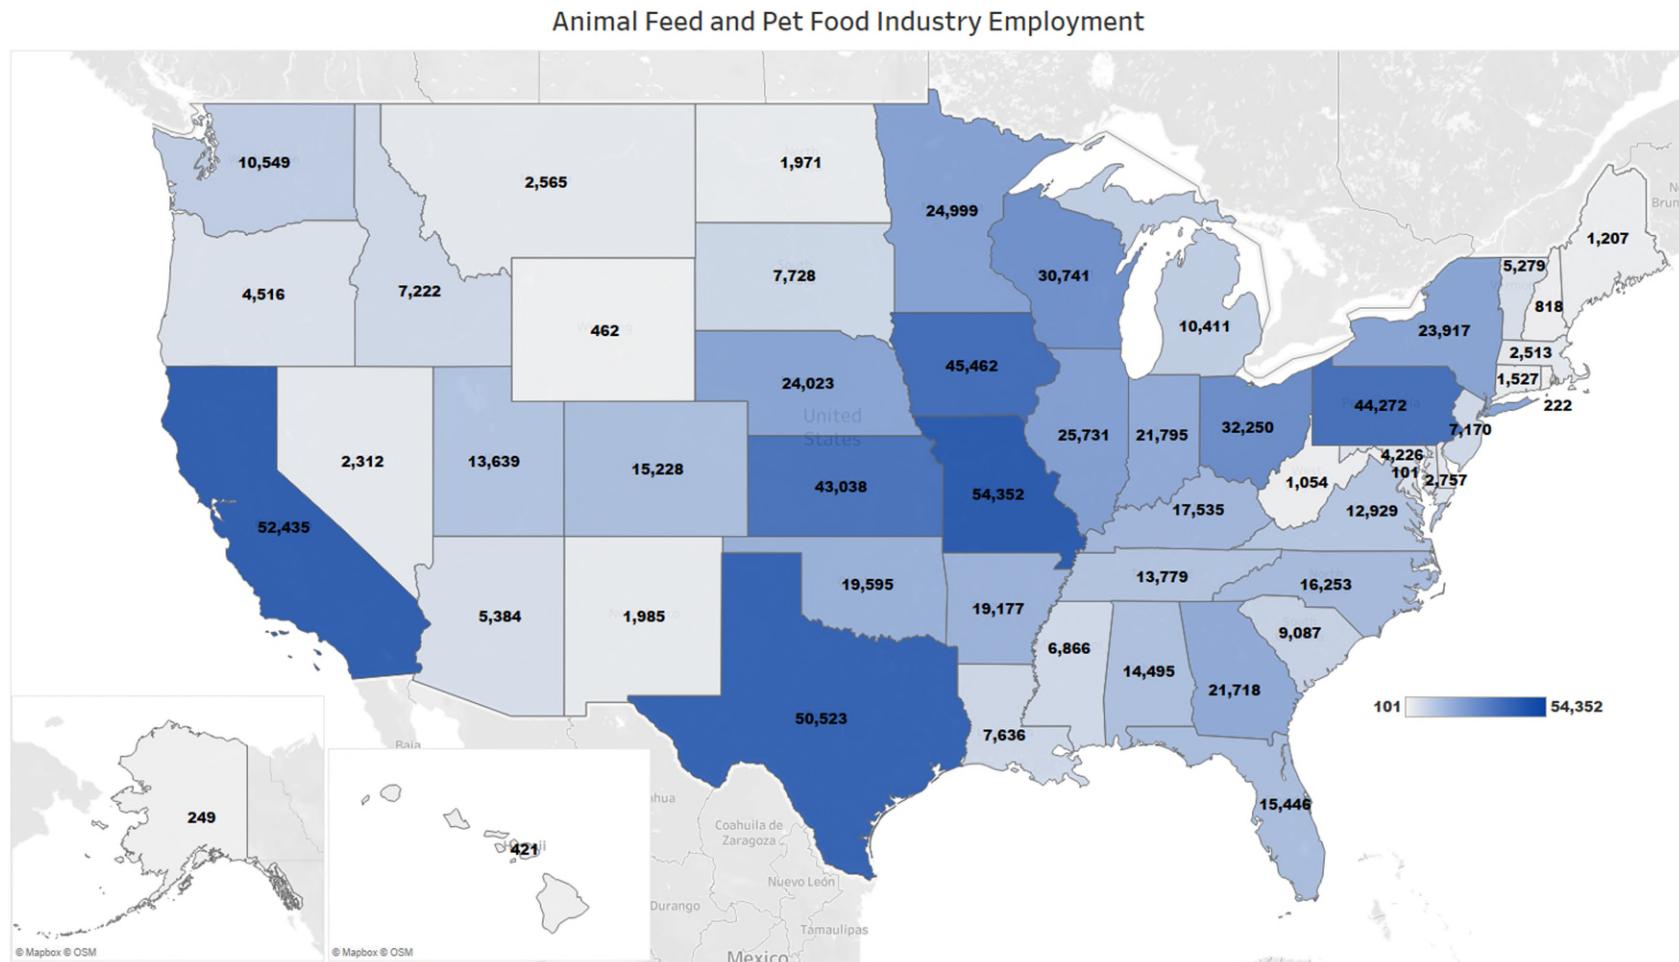

Figure 6. Animal Feed and Pet Food Industry Employment by State

4.2.2 Value Added

The animal feed and pet food manufacturing industries contribute an estimated \$98.4 billion in total value added in the United States. In addition to purchasing needed inputs, the animal feed and pet food manufacturing industries also generate economic activity by utilizing related services and industries such as truck and rail transportation services, financial institutions, advertising, and more. The five states with the largest contribution in terms of value added are Missouri (\$7.2 billion), California (\$7.1 billion), Kansas (\$6.3 billion), Texas (\$6.1 billion), and Iowa (\$6.0 billion) (Figure 7).

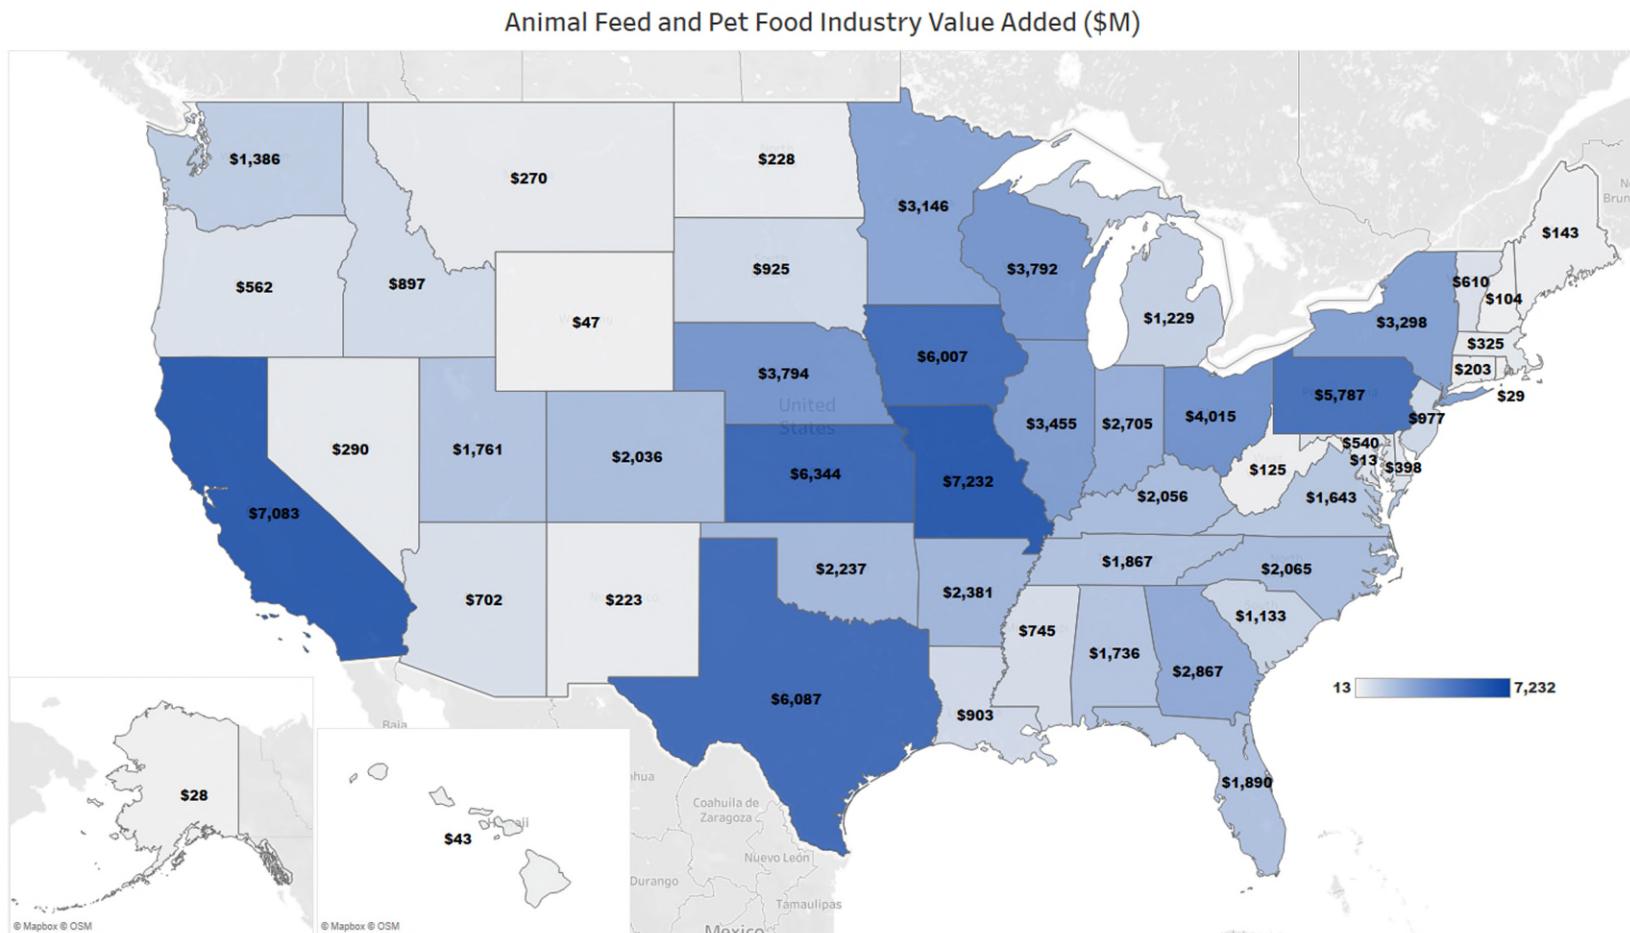

Figure 7. Animal Feed and Pet Food Industry Value Added by State

4.2.3 Labor Income

The animal feed and pet food manufacturing industries contribute an estimated \$55.0 billion in total labor income in the United States. Labor income contribution by state is shown in Figure 8. California has the highest total labor income with an estimated value of \$4.0 billion. The other states in the top five are Missouri, Texas, Pennsylvania, and Iowa. Each of these top states have a considerable number of animal feed and pet food mills. For example, Texas is home to 19 pet food facilities and more than 600 animal feed mills.

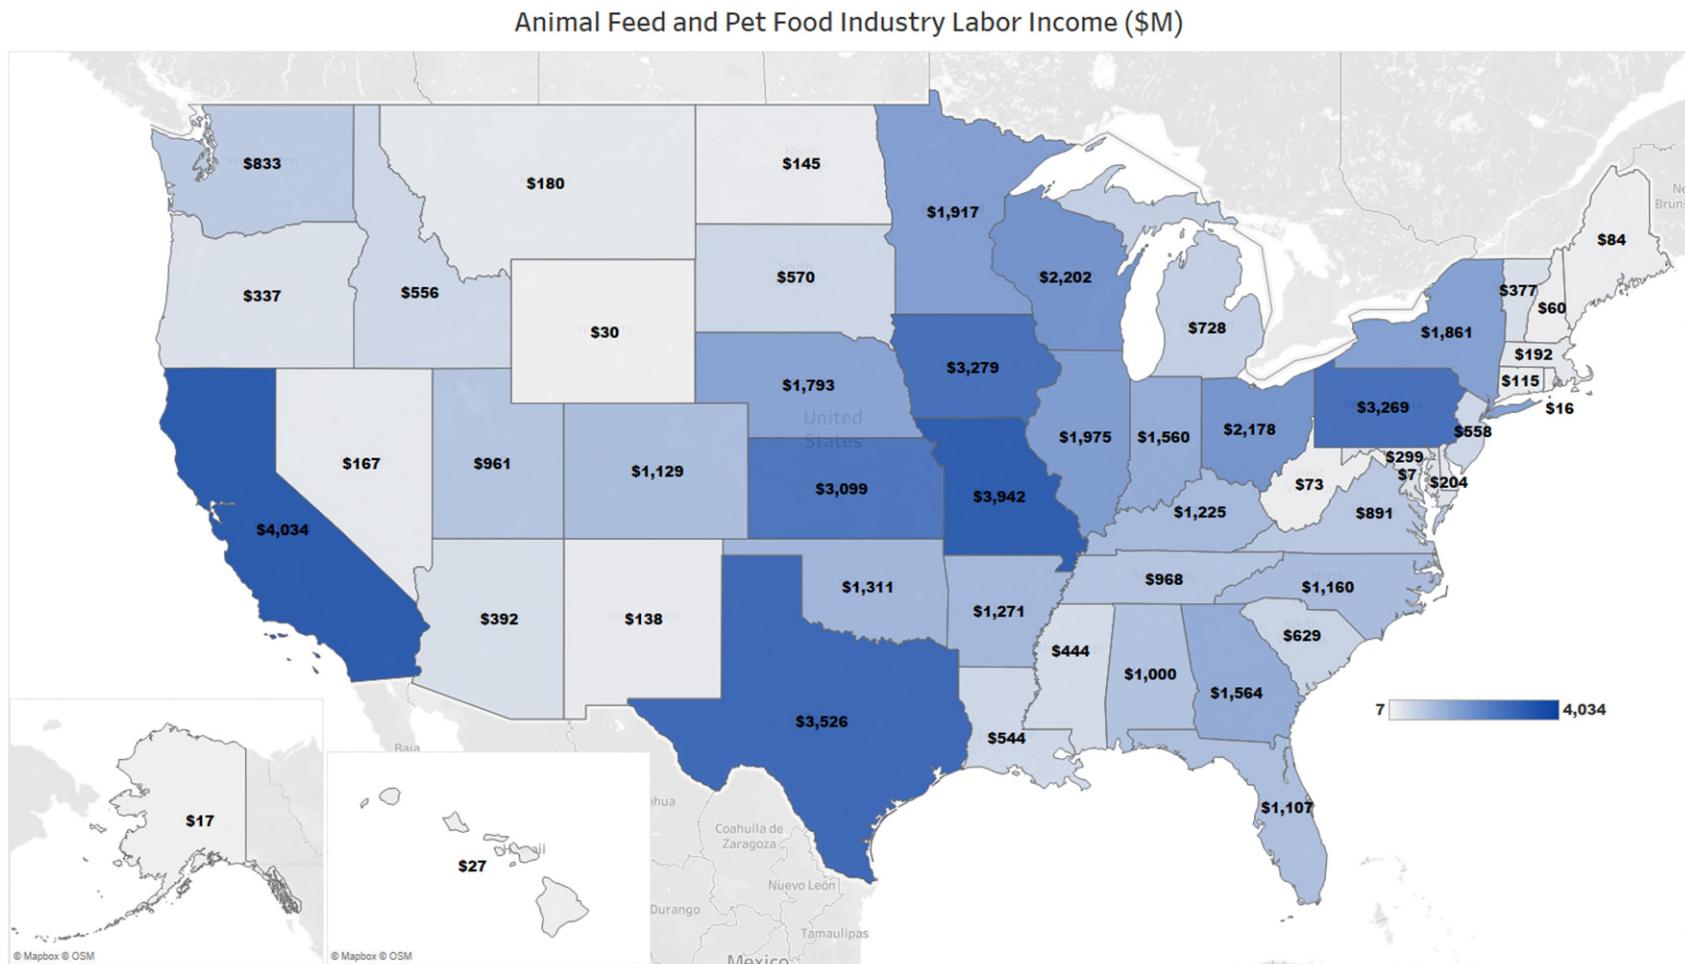

Figure 8. Animal Feed and Pet Food Industry Labor Income by State

4.2.4 Output

The animal feed and pet food manufacturing industries contribute roughly \$267.1 billion in total output (sales) within and related to these industries in the United States. As shown in Figure 9, the states with the highest contribution in terms of output are California (\$19.5 billion), Missouri (\$18.6 billion), Texas (\$17.1 billion), Iowa (\$16.5 billion), and Kansas (\$16.2 billion).

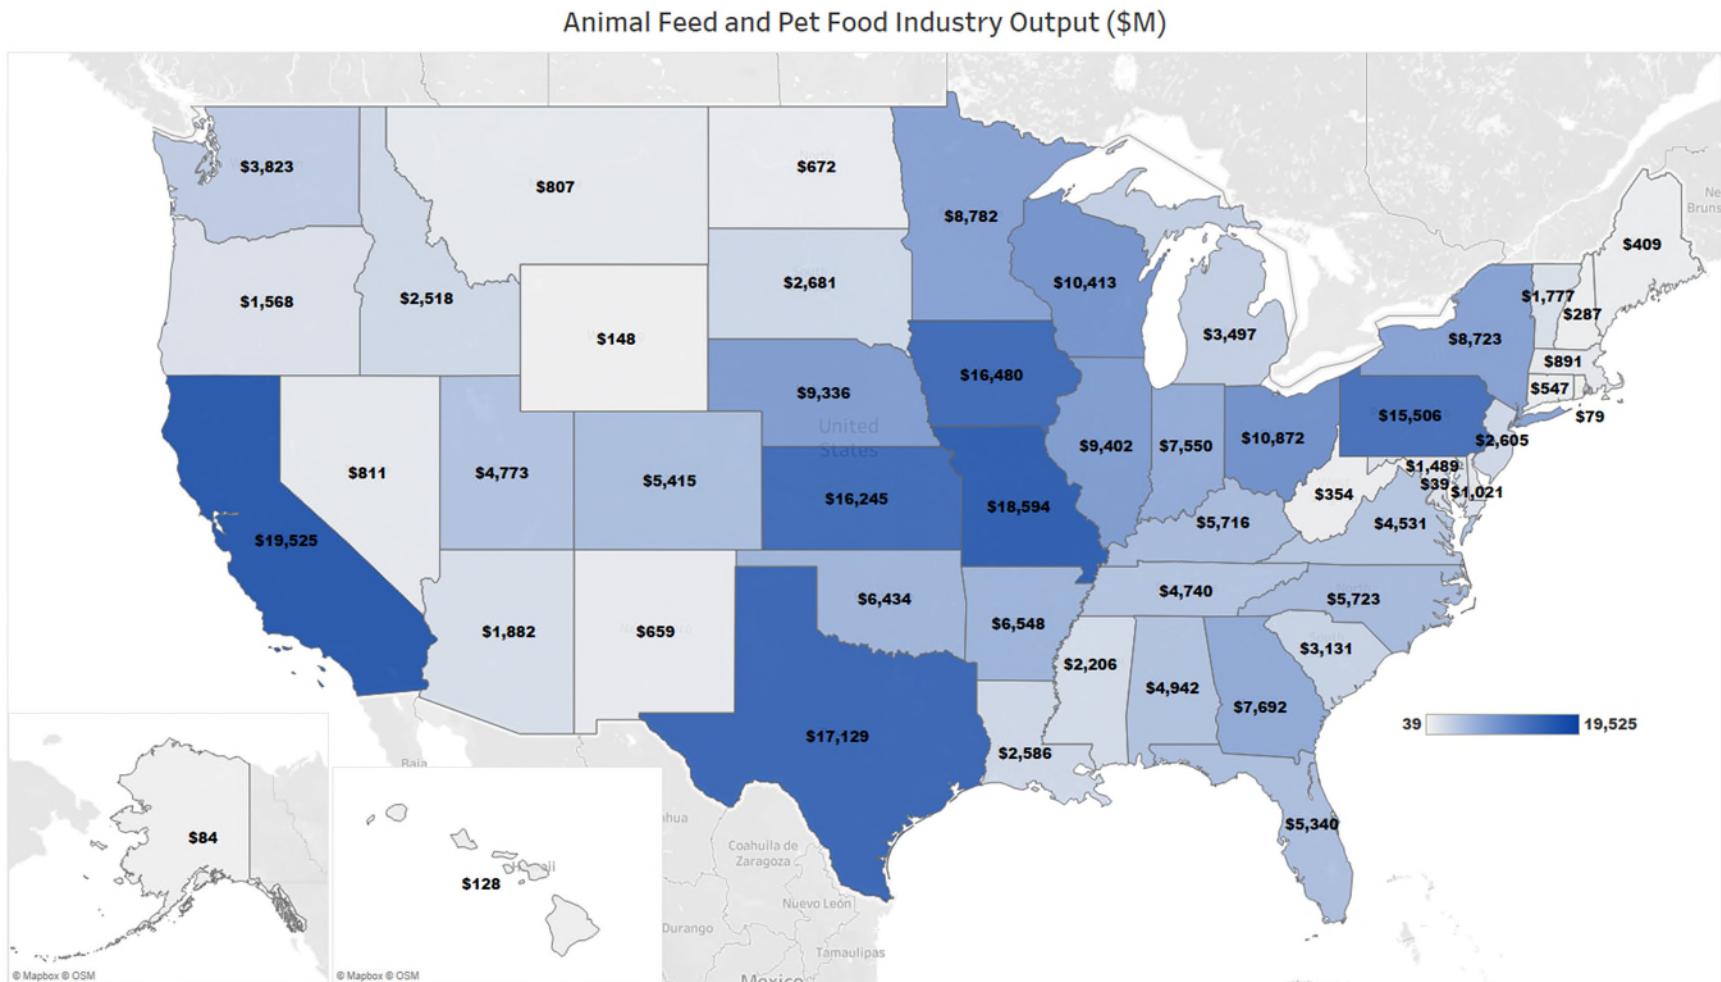

Figure 9. Animal Feed and Pet Food Industry Output by State

4.2.5 Taxes

The economic activity associated with the animal feed and pet food manufacturing industries is also a significant source of tax revenue. An estimated net total of \$18.5 billion in local, state, and federal taxes is paid as a result of activity within and related to these industries. The estimated tax contribution by state is shown in Figure 10.

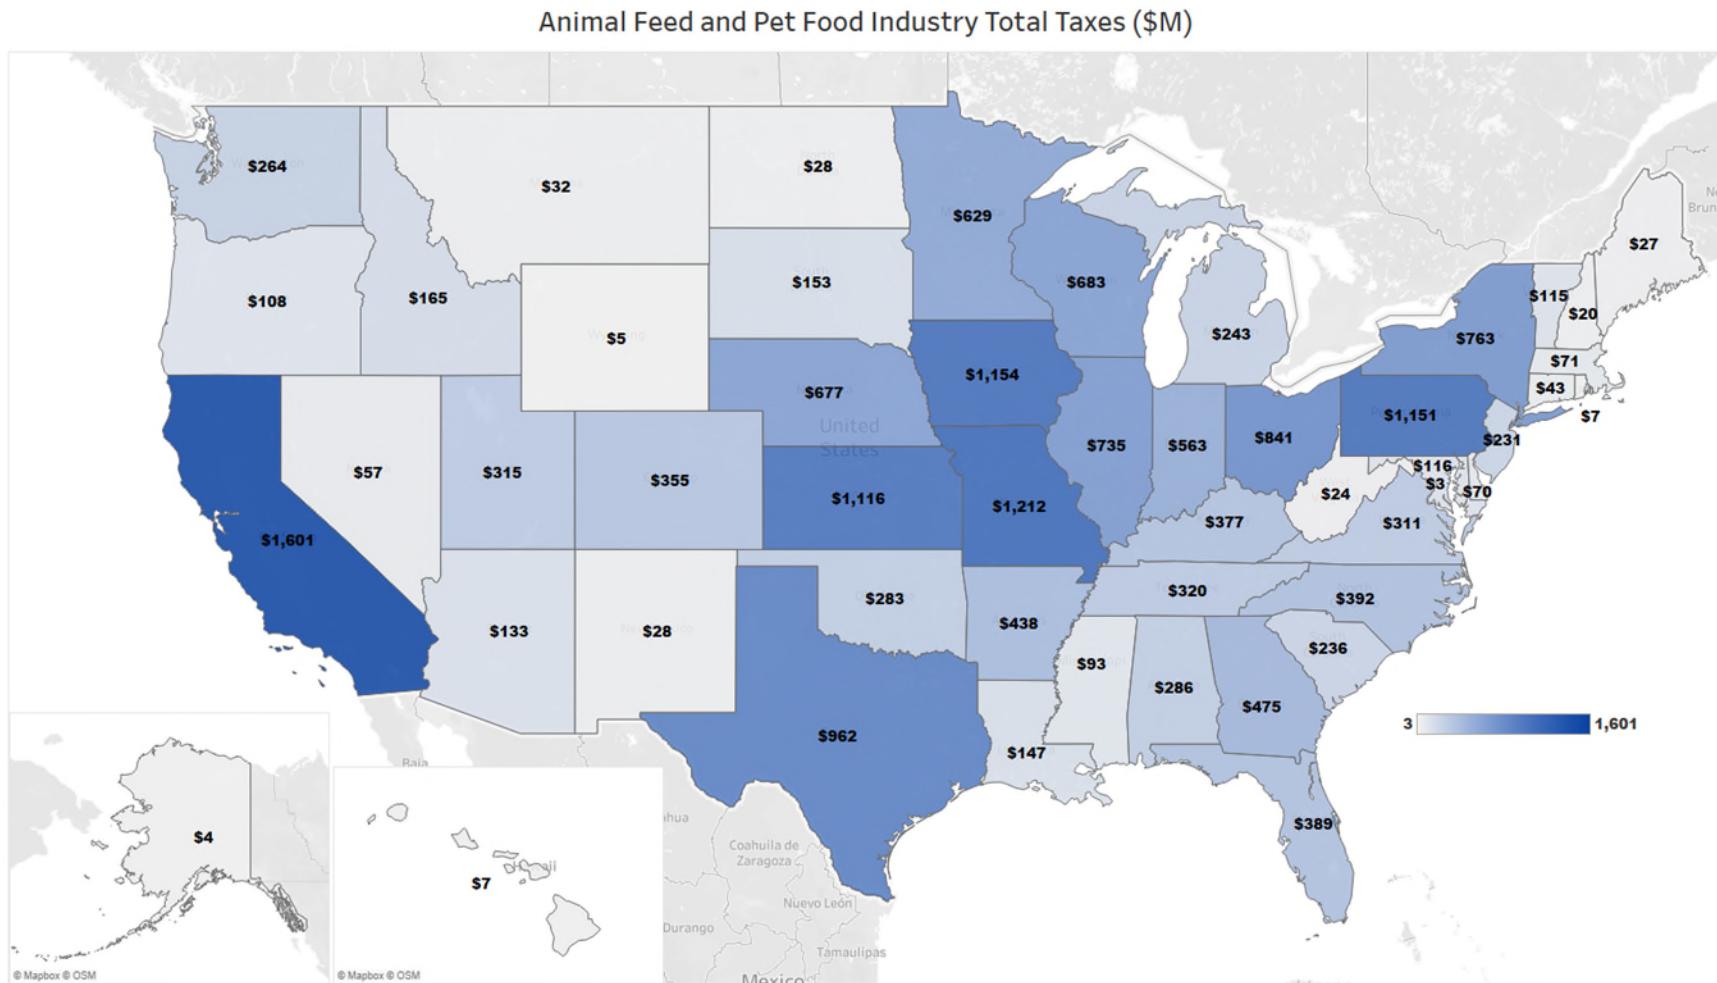

Figure 10. Animal Feed and Pet Food Industry Total Taxes by State

4.3 Combined Congressional District Results

Taking the same methodology used to estimate the state and national results, federal congressional district results are provided in this section. While some congressional districts are mentioned throughout this section, all results can be found in Appendix C: Detailed Congressional Level Results.

4.3.1 Jobs

Figure 11 shows the 2023 congressional districts in terms of the total jobs contributed by that district's animal feed and pet food manufacturing industries. The U.S. congressional districts with the most jobs contributed include Kansas-2 (23,588), Texas-13 (15,971), Missouri-7 (15,615), Iowa-4 (14,676), and Nebraska-3 (14,075).

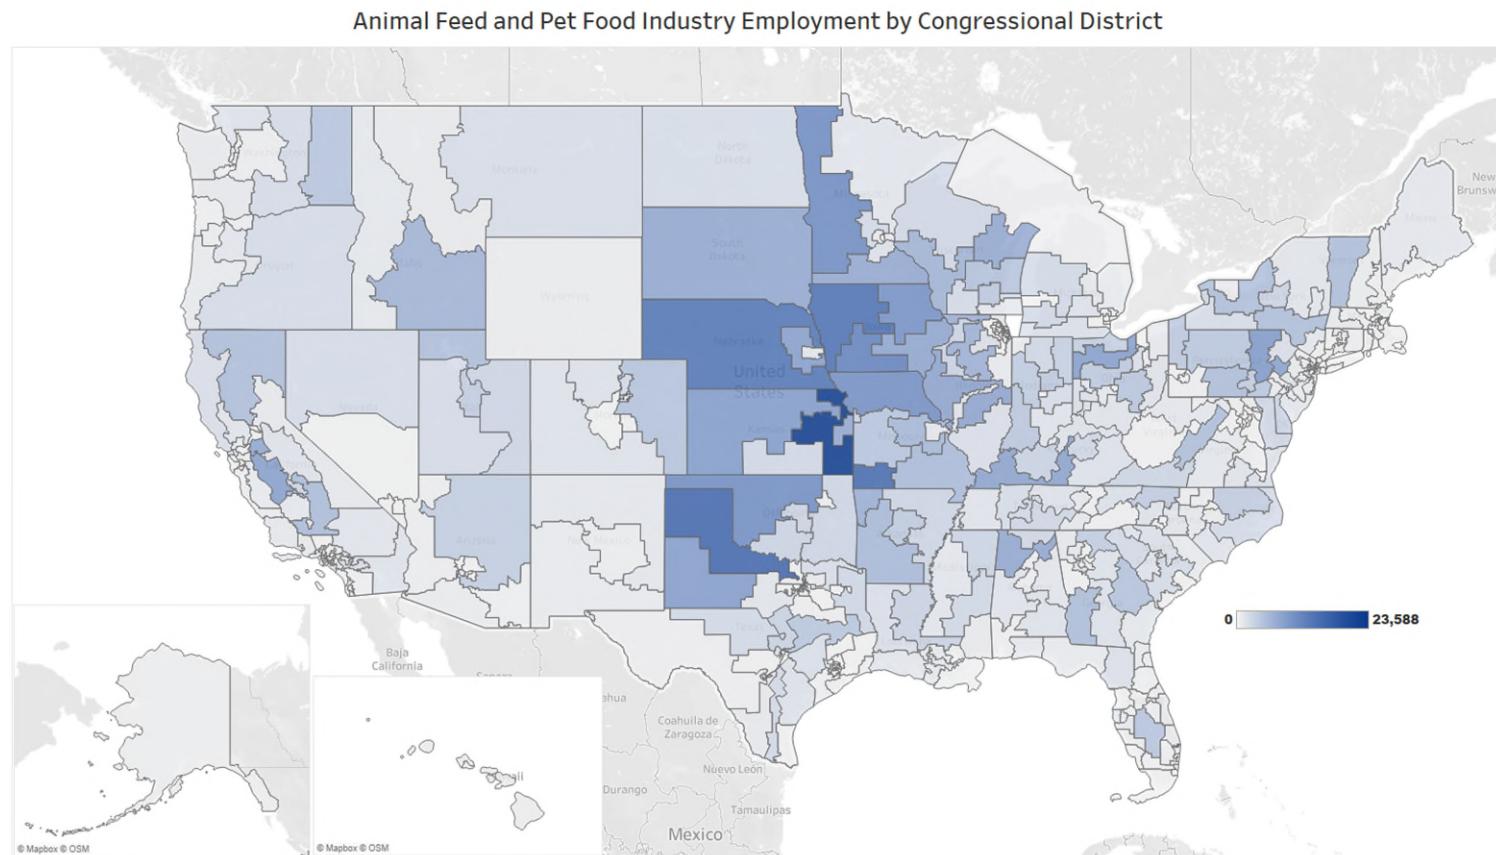

Figure 11. Animal Feed and Pet Food Industry Employment by Congressional District

4.3.2 Value Added

The leading U.S. congressional districts for value added from animal feed and pet food manufacturing and related industries include Kansas-2 (\$3.4 billion), Nebraska-3 (\$2.2 billion), Texas-13 (\$2.1 billion), Iowa-4 (\$1.9 billion), and Missouri-7 (\$1.9 billion) (Figure 12).

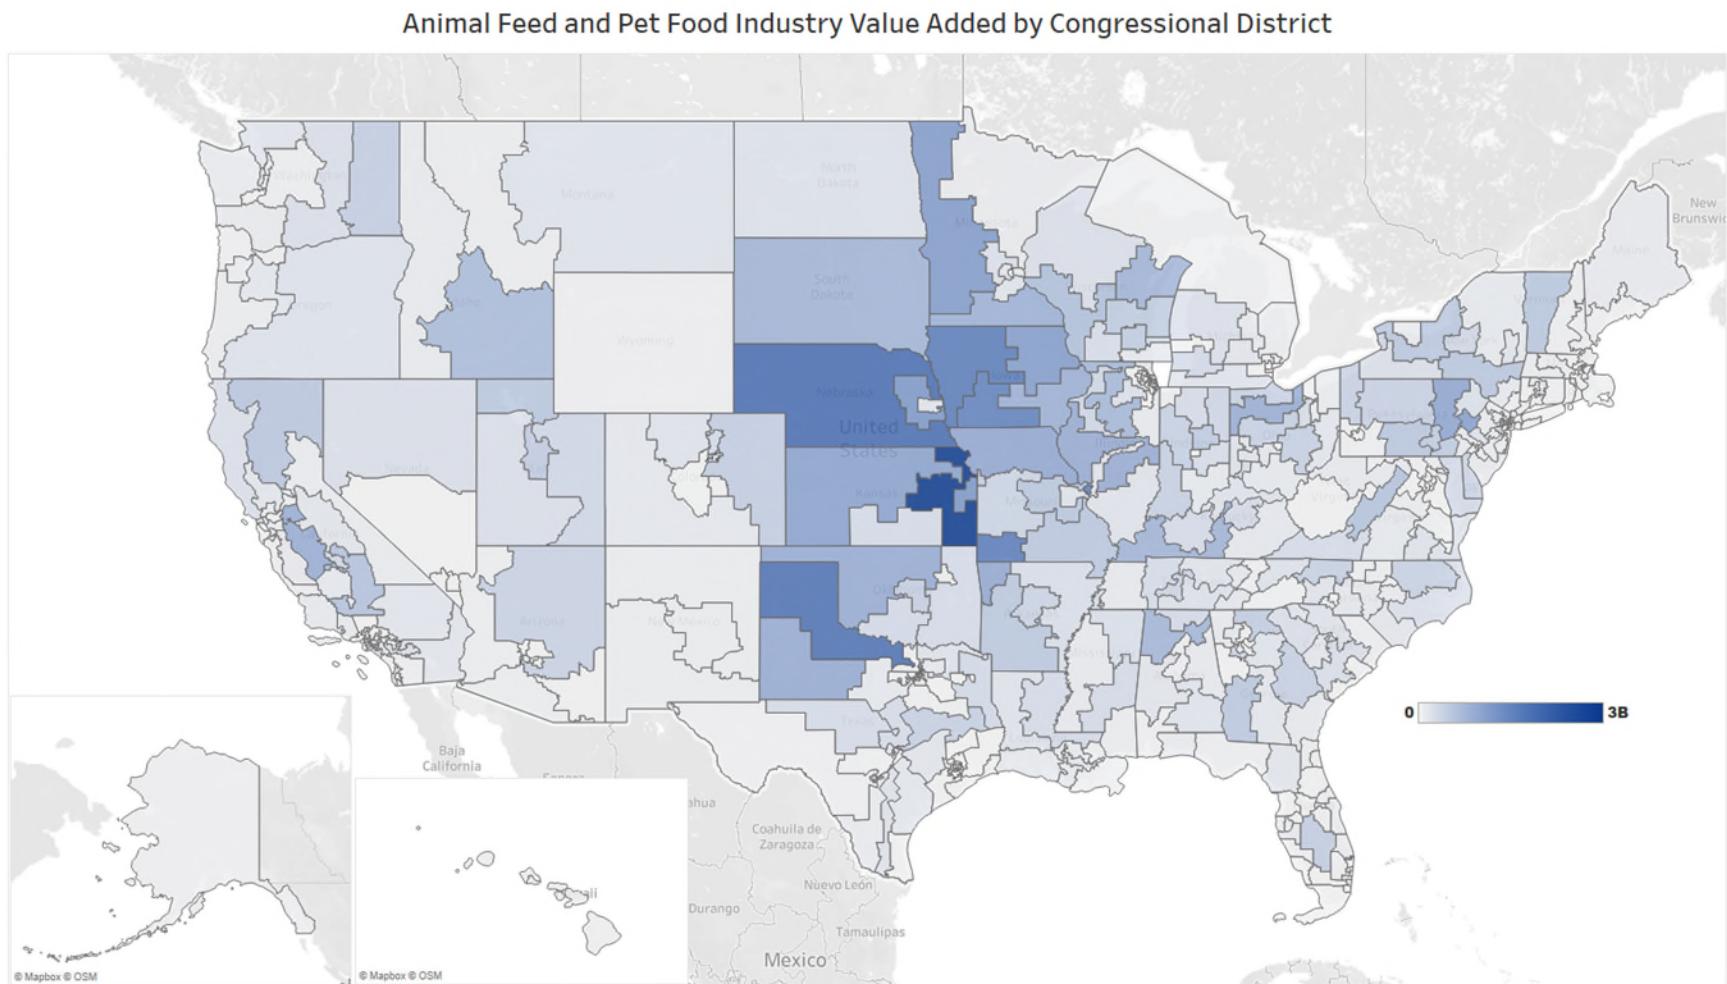

Figure 12. Animal Feed and Pet Food Industry Value Added by Congressional District

4.3.3 Labor Income

Figure 13 shows the estimated labor income contribution of the animal feed and pet food manufacturing industries in each U.S. congressional district. Six districts have an estimated labor income contribution of more than \$1.0 billion: Kansas-2 (\$1.6 billion), Texas-13 (\$1.4 billion), Missouri-7 (\$1.1 billion), Iowa-4 (\$1.0 billion), Nebraska-3 (\$1.0 billion), and Iowa-3 (\$1.0 billion).

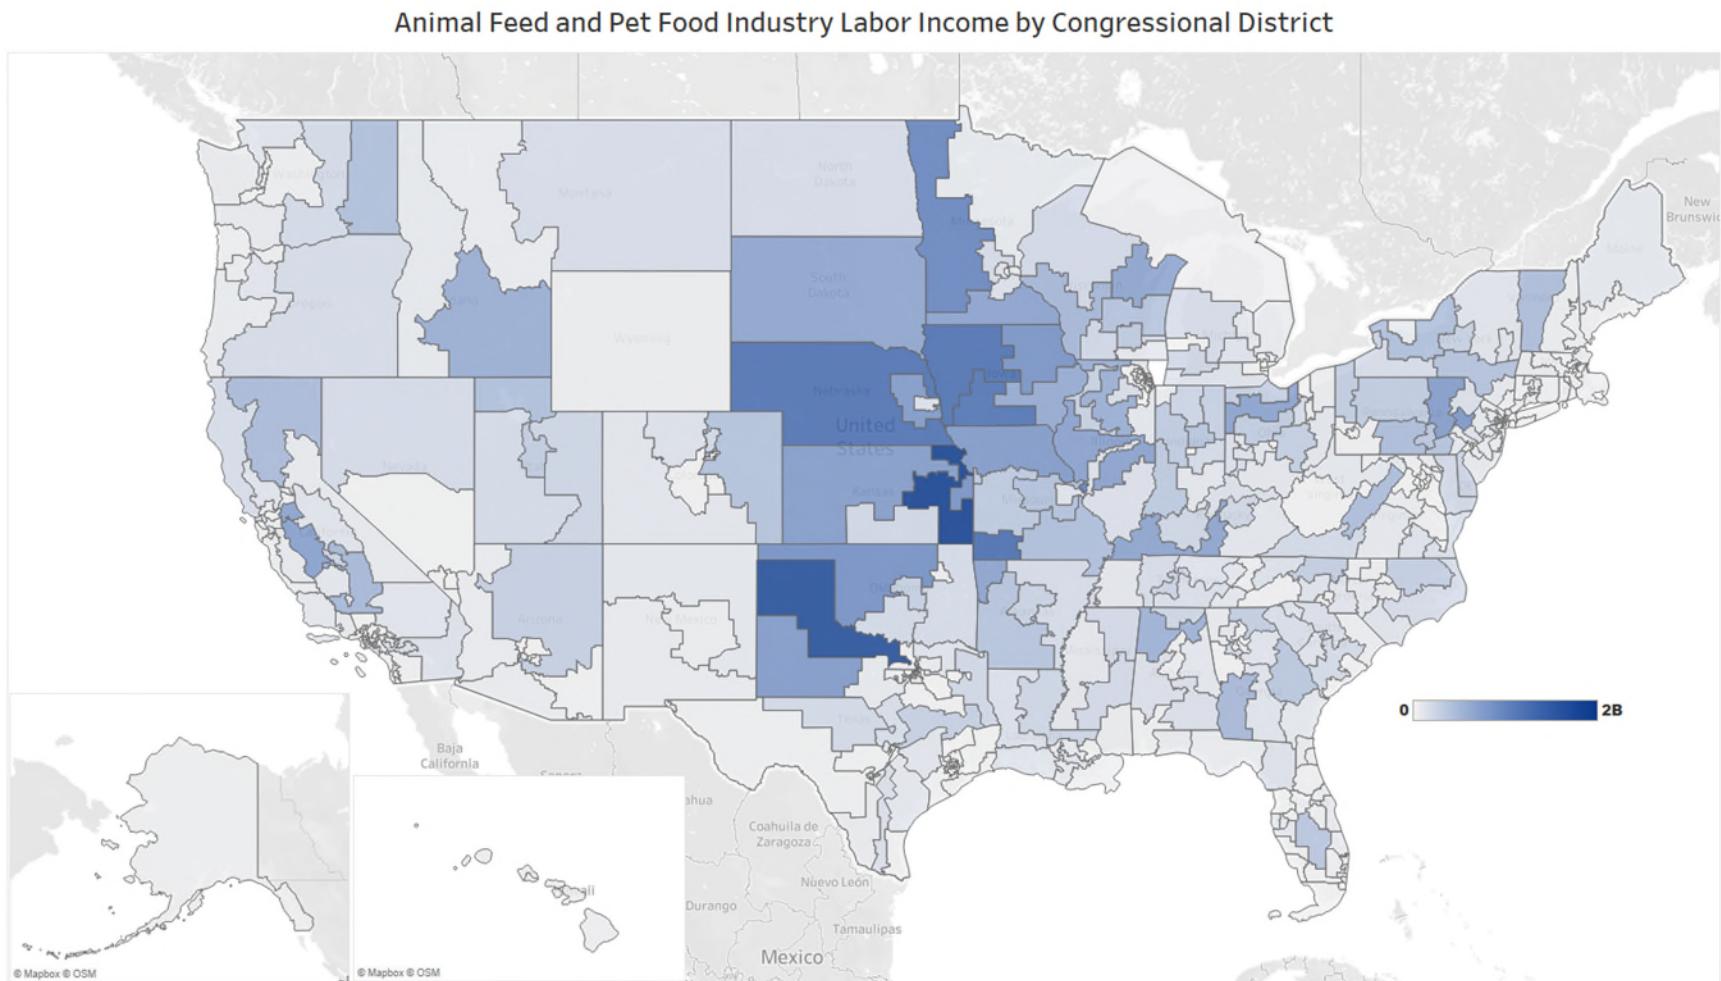

Figure 13. Animal Feed and Pet Food Industry Labor Income by Congressional District

4.3.4 Output

Figure 14 shows the estimated output (sales) contribution of the animal feed and pet food manufacturing industries in each U.S. congressional district. The top five congressional districts in this category are Kansas-2 (\$8.9 billion), Texas-13 (\$5.8 billion), Iowa-4 (\$5.8 billion), Nebraska-3 (\$5.6 billion), and Missouri-7 (\$4.6 billion).

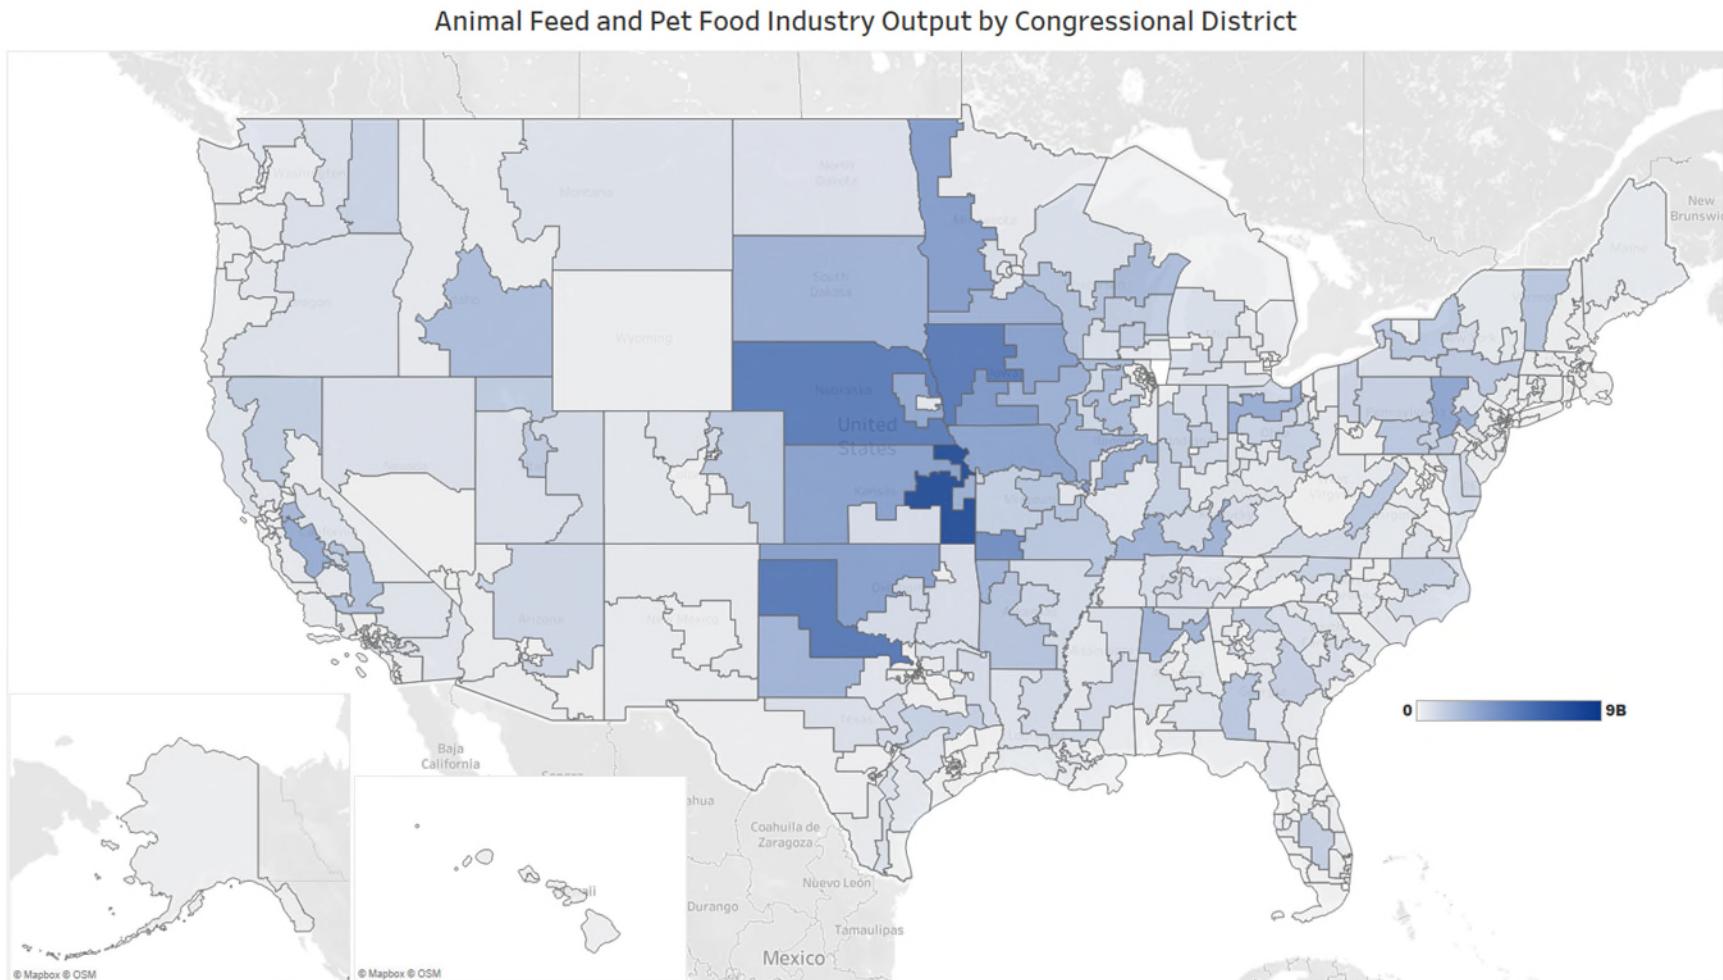

Figure 14. Animal Feed and Pet Food Industry Output by Congressional District

4.3.5 Taxes

The leading U.S. congressional districts for estimated taxes paid by the animal feed and pet food manufacturing industries include Kansas-2 (\$635.6 million), Iowa-3 (\$446.4 million), Missouri-6 (\$443.1 million), Nebraska-3 (\$428.4 million), and Texas-13 (\$347.6 million) (Figure 15).

Animal Feed and Pet Food Industry Total Taxes by Congressional District

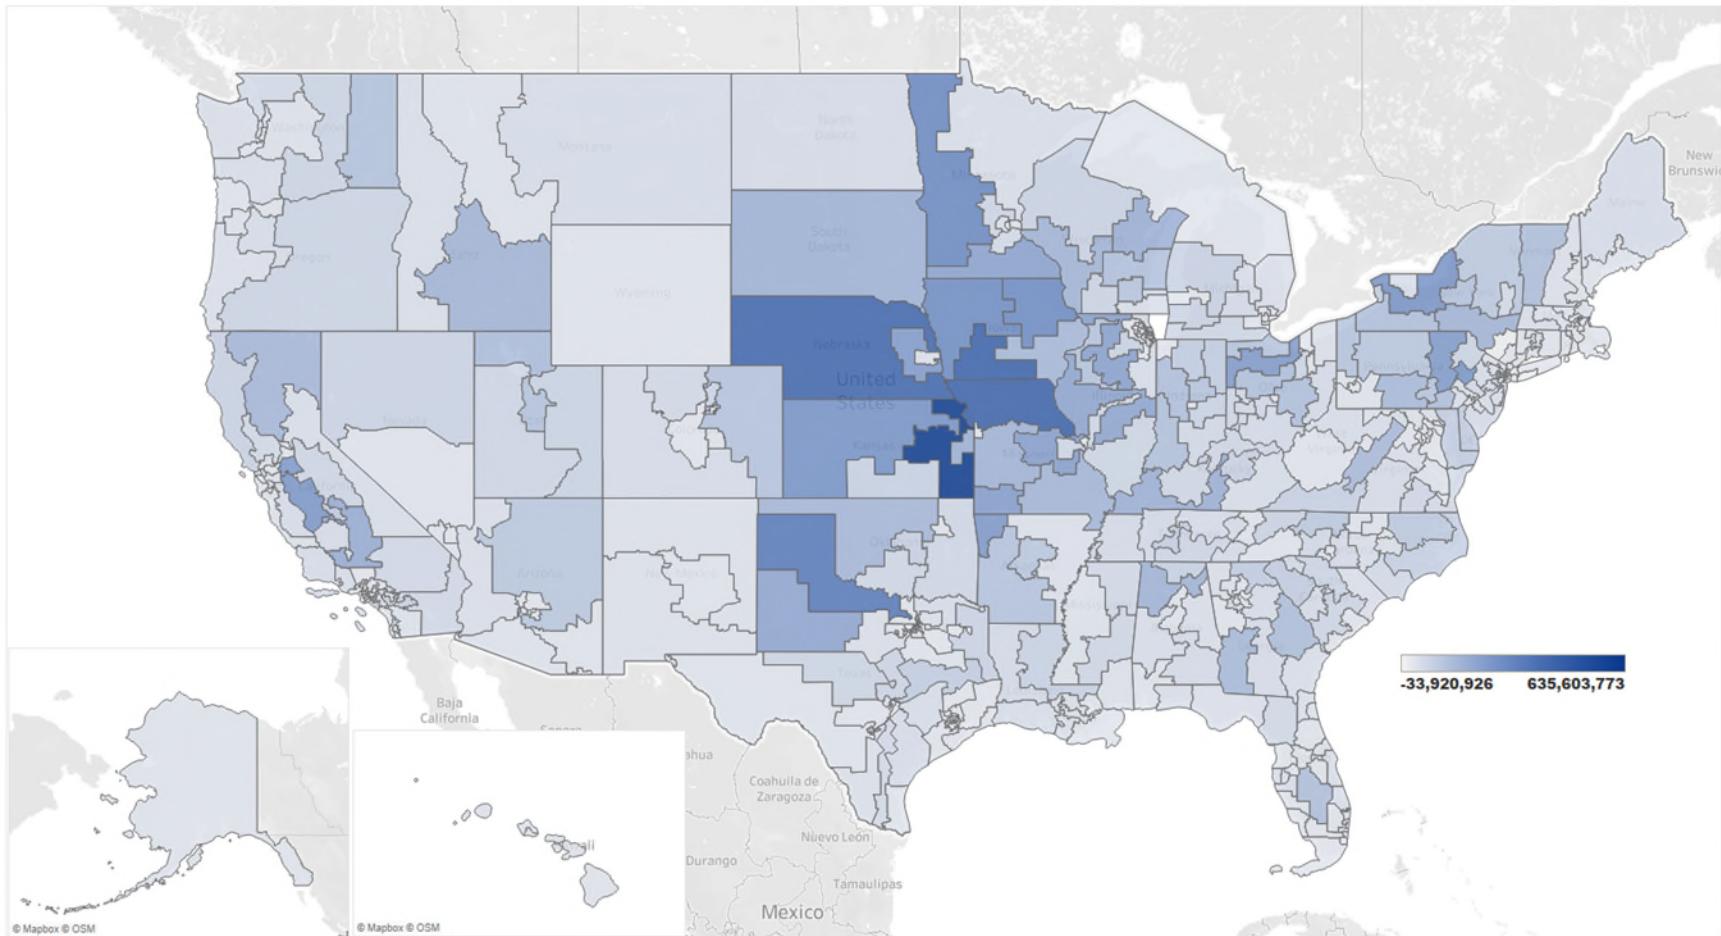

Figure 15. Animal Feed and Pet Food Industry Total Taxes by Congressional District

4.4 Animal Feed Industry National and State Results

The U.S. animal feed manufacturing industry, as a subset of the total animal food industry is estimated to directly contribute the following to the national economy:

- \$8.0 billion in value added, including \$4.0 billion in labor income
- 47,406 jobs
- \$50.7 billion in output (sales)
- \$2.2 billion in local, state, and federal taxes

Including indirect and induced effects, the **total** contribution of the U.S. animal feed manufacturing industry is:

- \$58.4 billion in value added, including \$34.5 billion in labor income
- 475,861 jobs
- \$164.8 billion in output
- \$11.1 billion in local, state, and federal taxes

Three states stand out in terms of the economic contribution of their animal feed manufacturing industries: Texas, California, and Iowa. All three states are home to many feed mills generating local and regional economic activity. Texas has 647 feed mills, California has 132, and Iowa has 376. The animal feed manufacturers in these three states contribute the following **total** activity to the economy:

- \$13.4 billion in value added, including \$7.8 billion in labor income
- 106,882 jobs
- \$38.0 billion in output
- \$2.6 billion in local, state, and federal taxes

4.4.1 Jobs

At the national level, the animal feed manufacturing industry contributes an estimated 475,861 jobs within and related to this industry. Figure 16 shows the estimated jobs contribution by state. The top five states in this category are Texas, California, Iowa, Ohio, and Pennsylvania. Texas leads the way in this category, with 647 feed mills helping to generate more than 41,000 jobs.

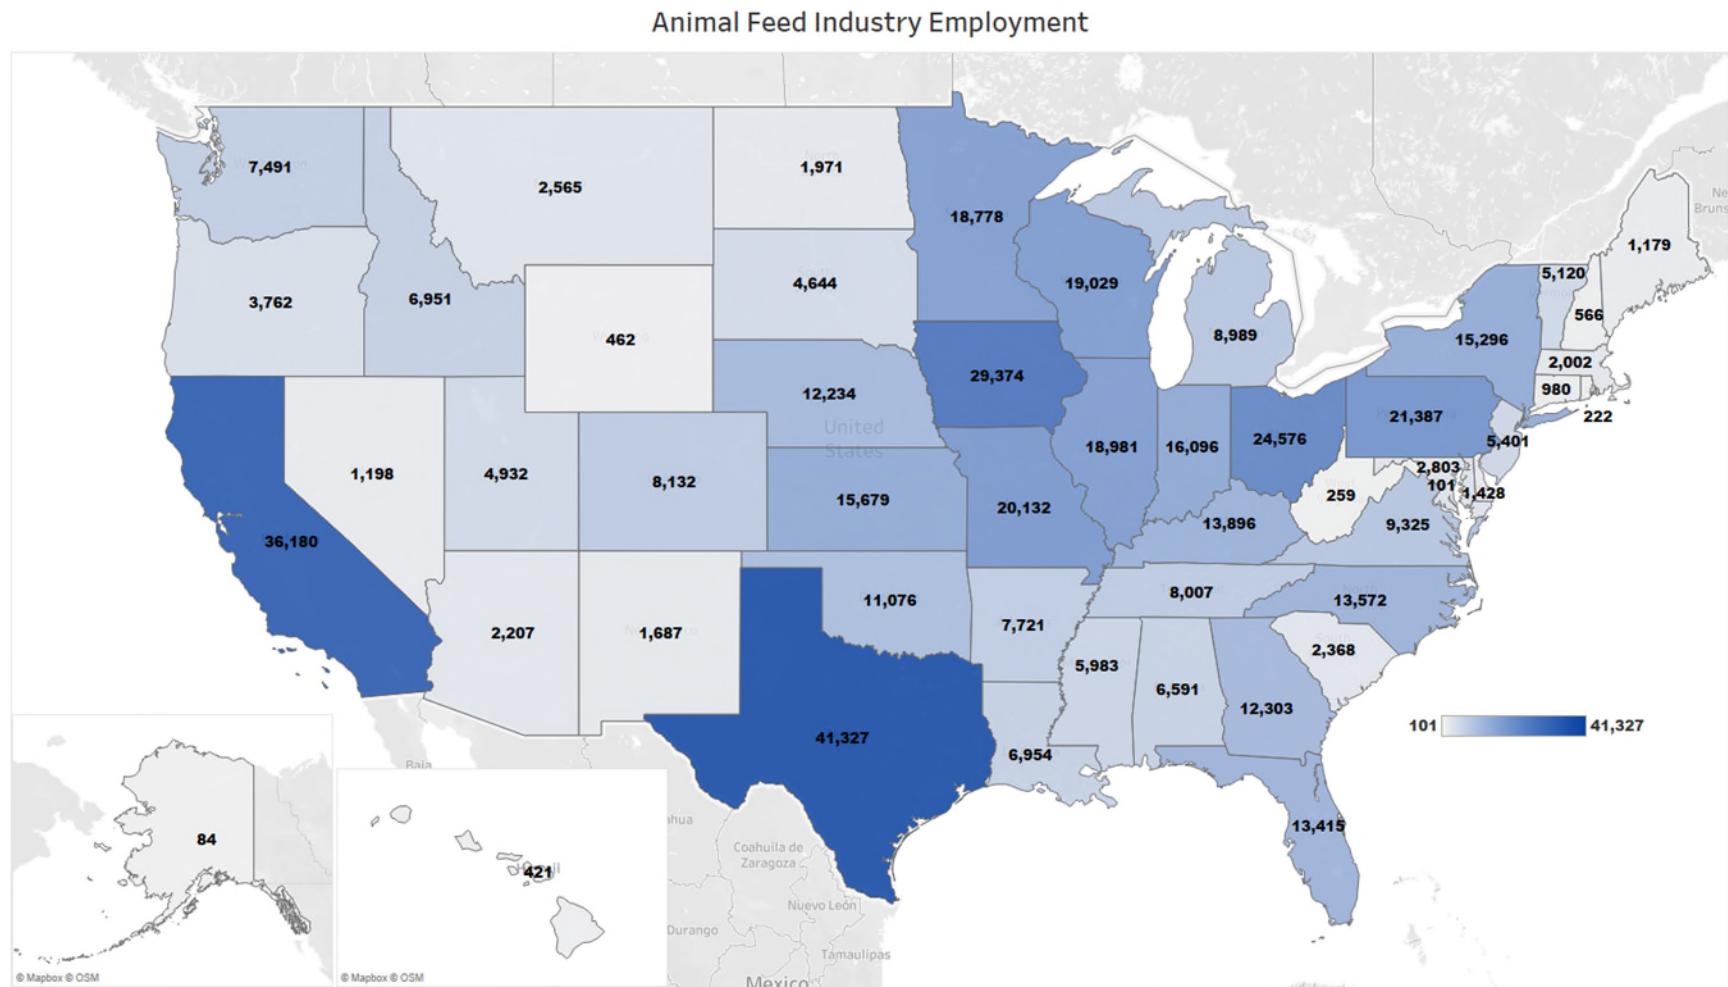

Figure 16. Animal Feed Industry Employment by State

4.4.2 Value Added

The animal feed manufacturing industry contributes an estimated \$58.4 billion in total value added across the United States. Figure 17 shows the estimated value-added contribution by state. The top five states in this category are Texas (\$4.9 billion), California (\$4.8 billion), Iowa (\$3.7 billion), Ohio (\$2.9 billion), and Pennsylvania (\$2.6 billion).

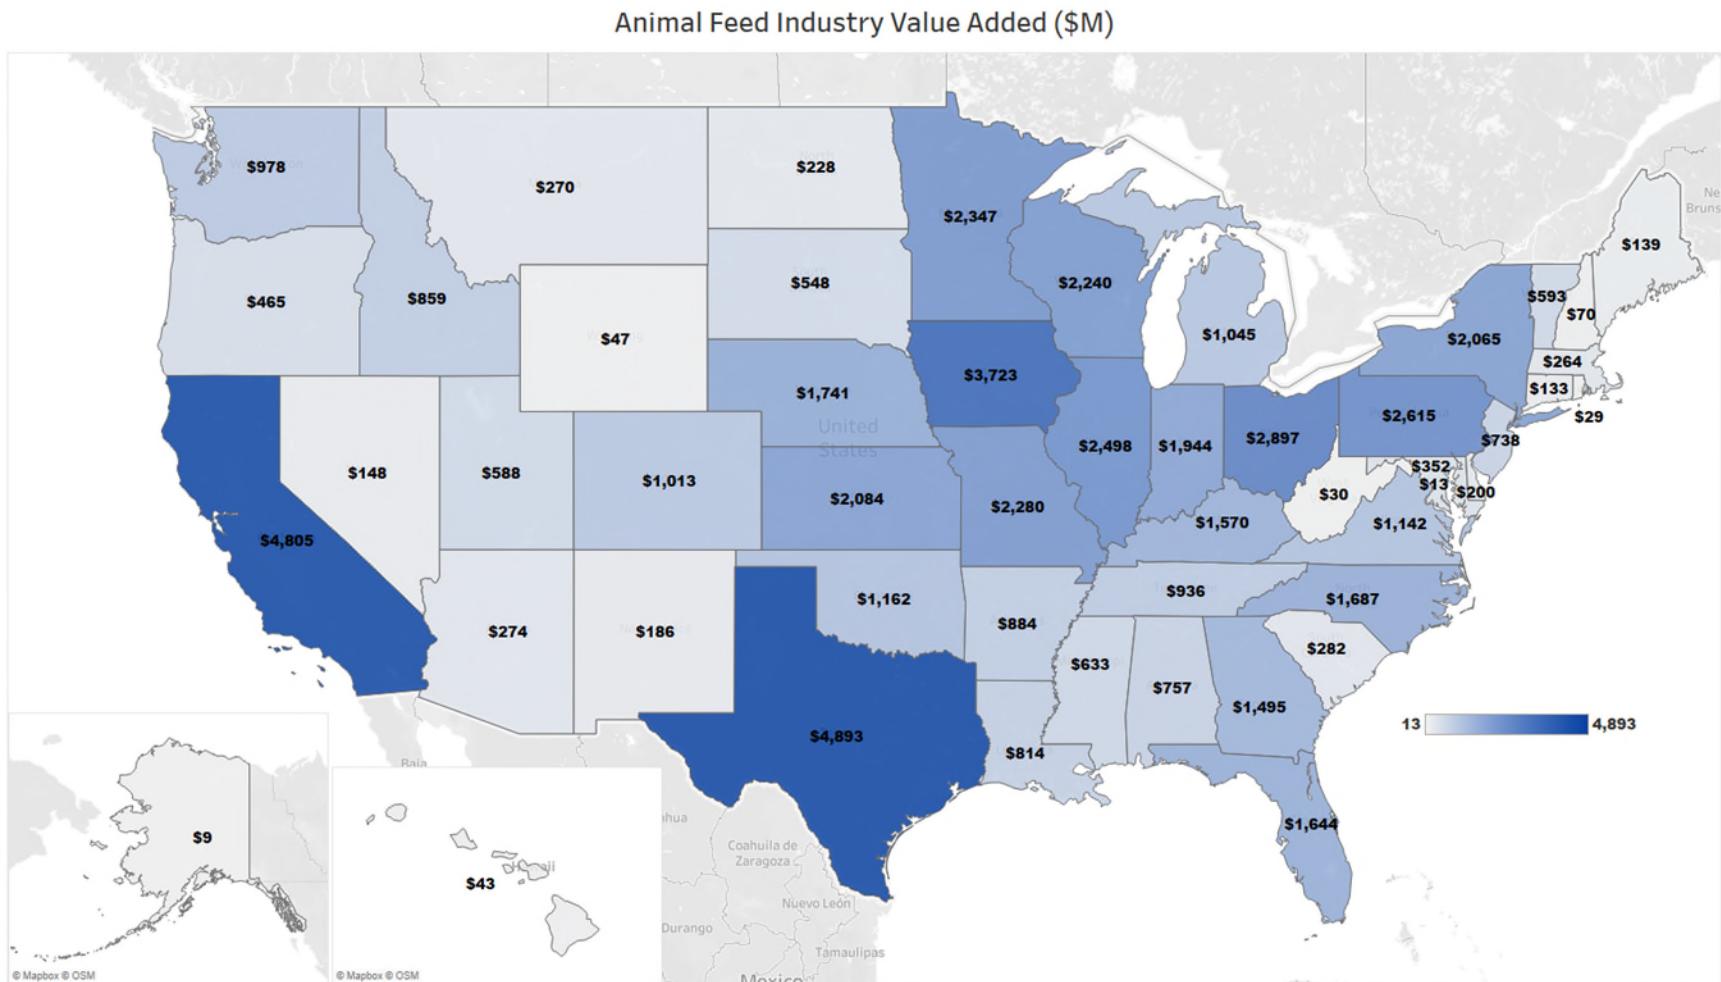

Figure 17. Animal Feed Industry Value Added by State

4.4.3 Labor Income

At the national level, the animal feed manufacturing industry contributes an estimated \$34.5 billion in total labor income within and related to this industry. Figure 18 shows the labor income contribution by state. Texas, California, and Iowa have an estimated total labor income contribution of more than \$2 billion.

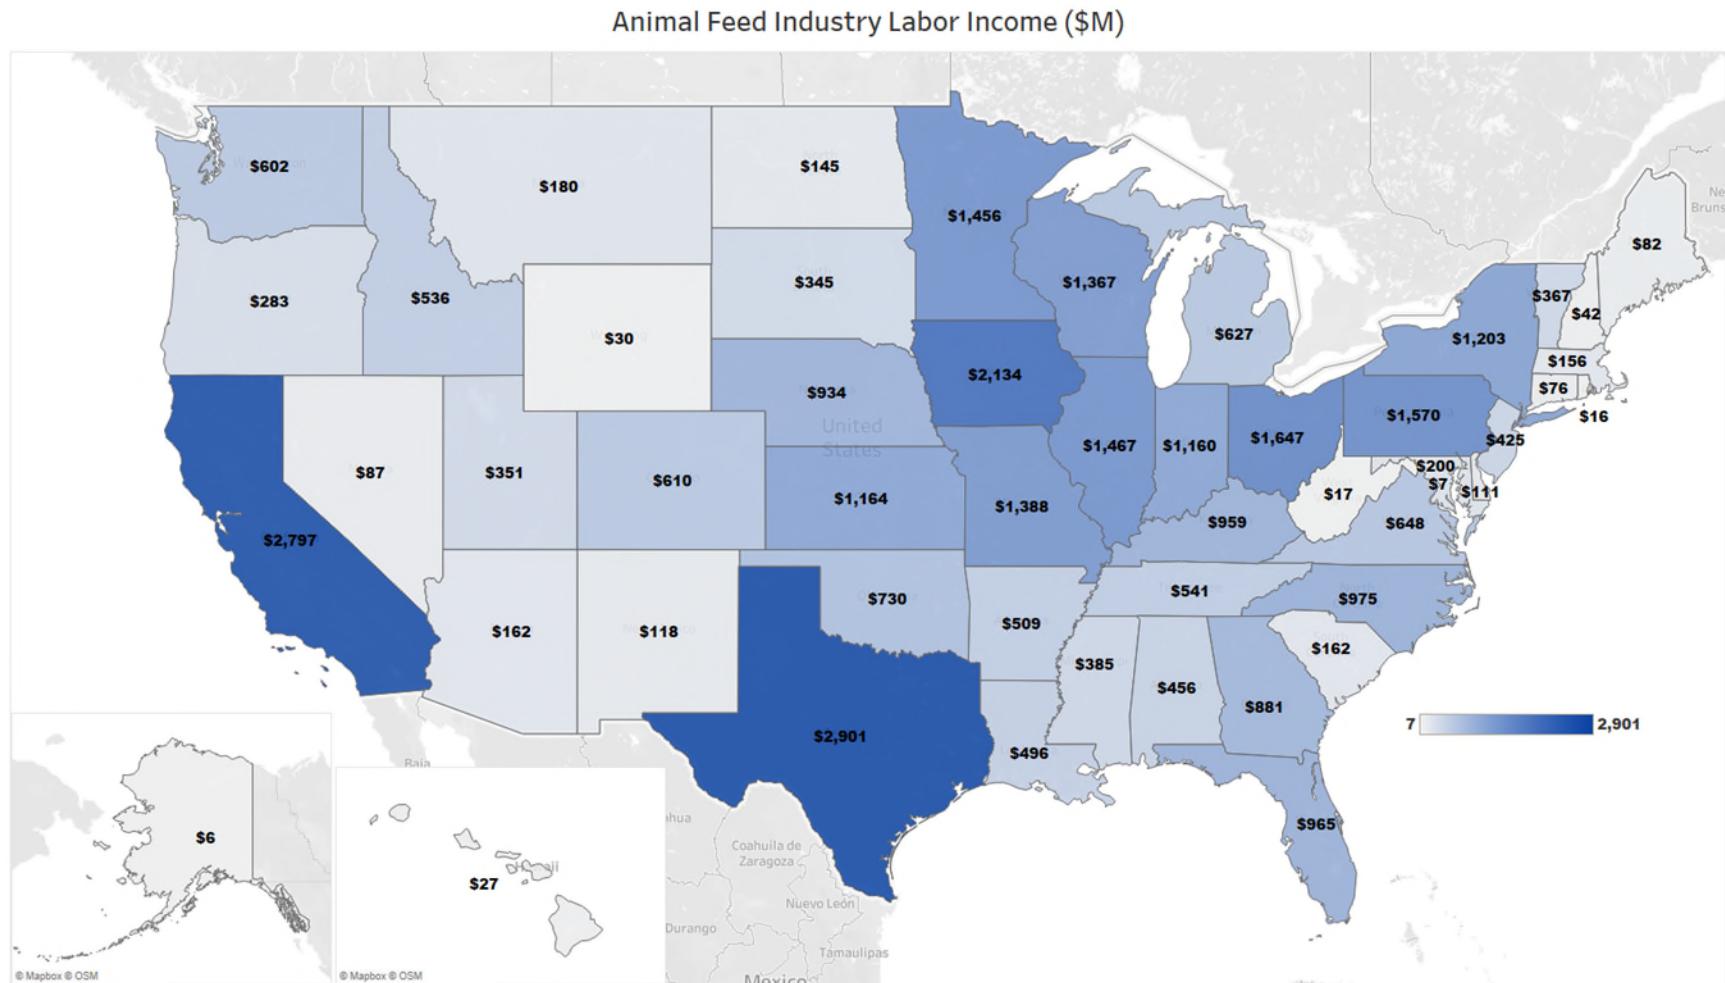

Figure 18. Animal Feed Industry Labor Income by State

4.4.4 Output

The animal feed manufacturing industry contributes an estimated \$164.8 billion in total output across the United States. Figure 19 shows the estimated output contribution by state. The top five states in this category are Texas (\$13.9 billion), California (\$13.4 billion), Iowa (\$10.6 billion), Ohio (\$8.1 billion), and Pennsylvania (\$7.4 billion).

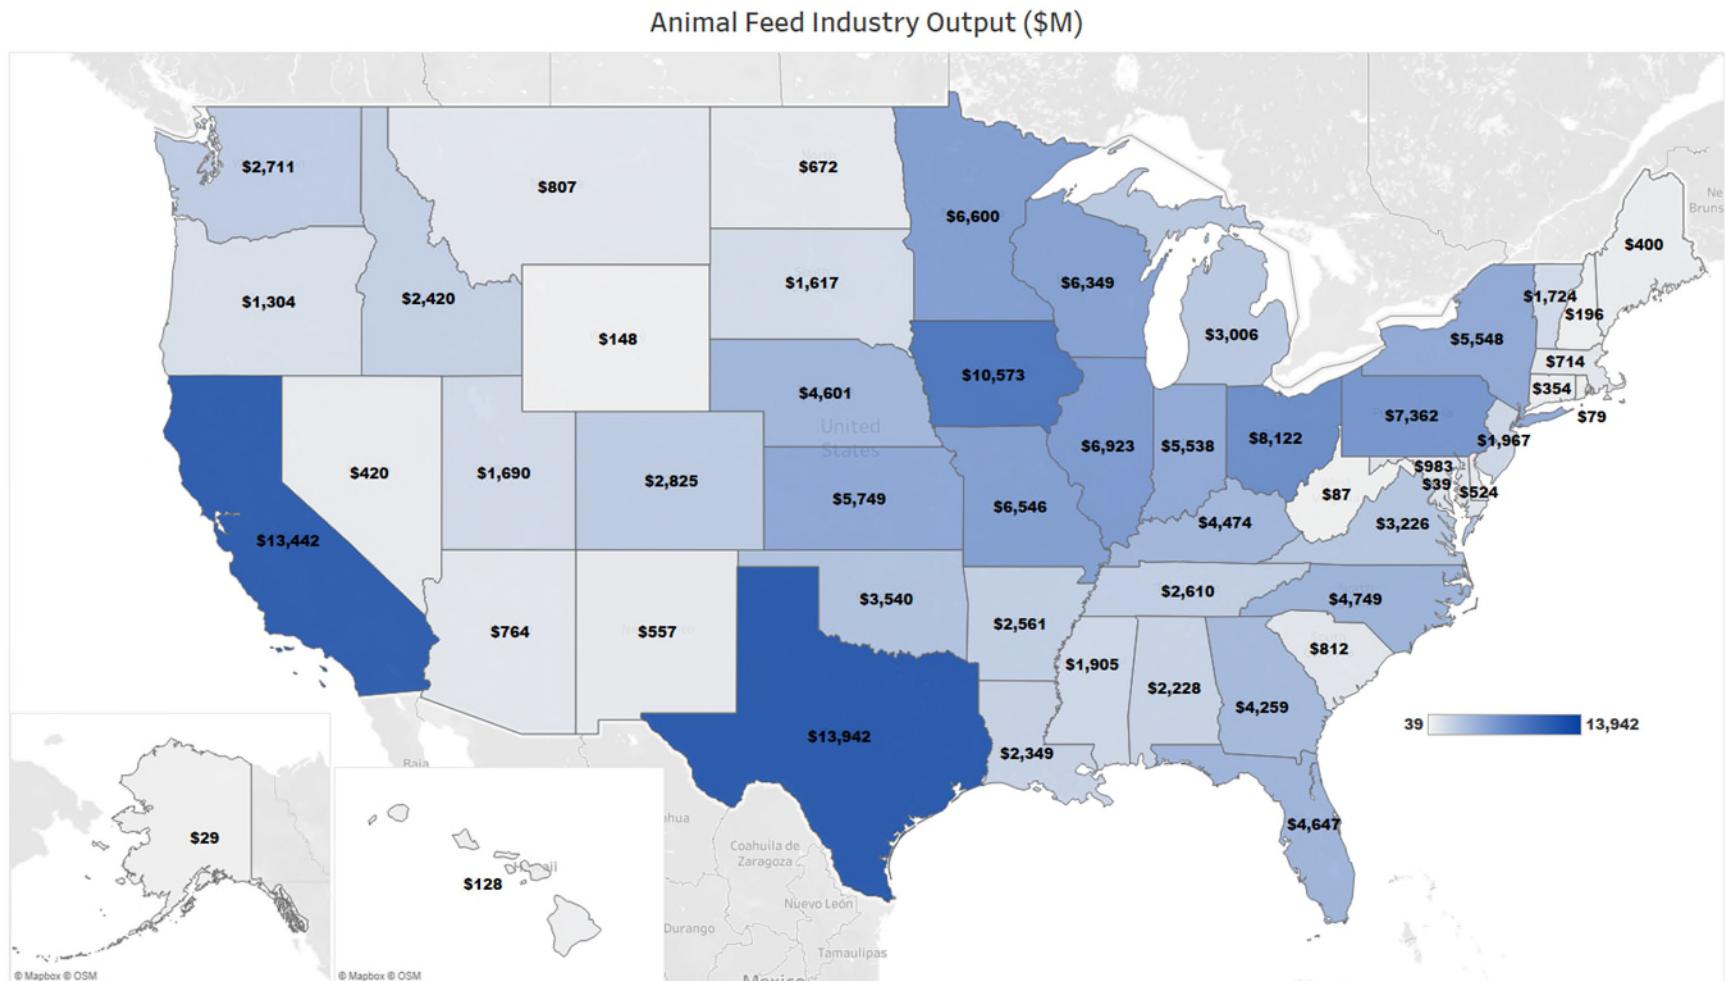

Figure 19. Animal Feed Industry Output by State

4.4.5 Taxes

The economic activity associated with the animal feed manufacturing industry is estimated to generate a net total of \$11.1 billion in local, state, and federal taxes. The estimated tax contribution by state is shown in Figure 20.

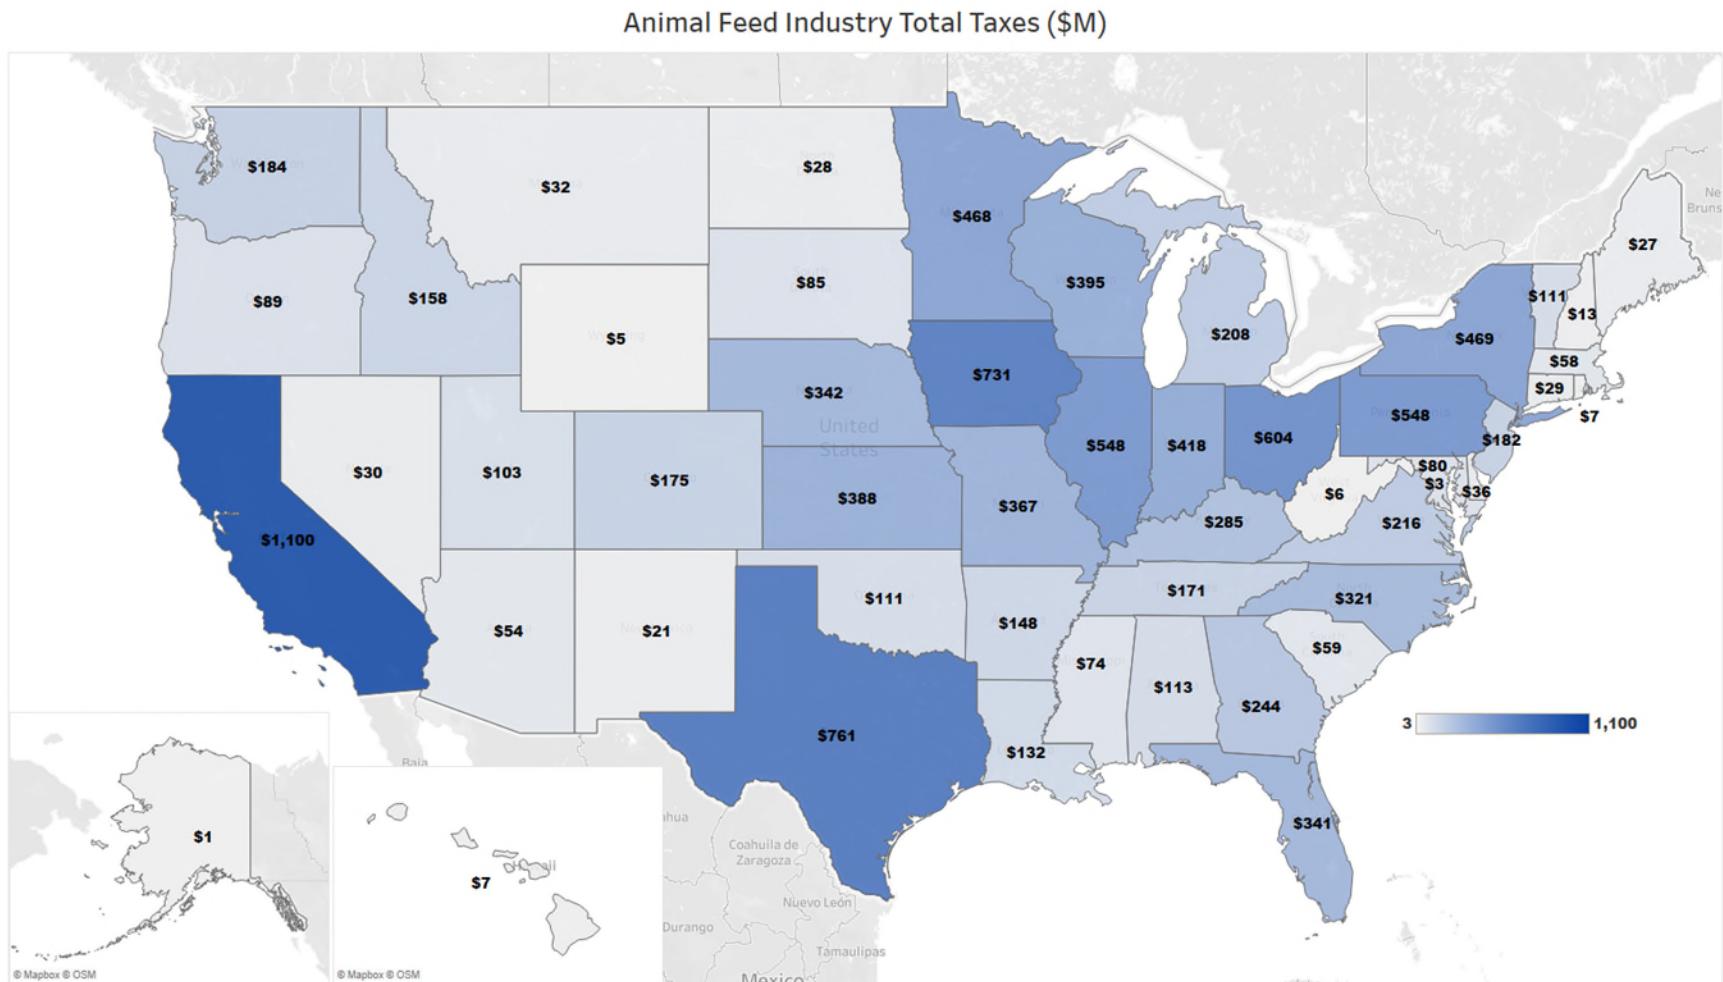

Figure 20. Animal Feed Industry Total Taxes by State

4.5 Animal Feed Congressional District Results

4.5.1 Jobs

Figure 21 shows the 2023 U.S. federal congressional districts in terms of the total jobs contributed by that district's animal feed manufacturing industry. The districts with the most jobs contributed include Texas-13 (14,352), Iowa-4 (10,976), Iowa-3 (8,562), Ohio-5 (8,262), and Minnesota-7 (8,130).

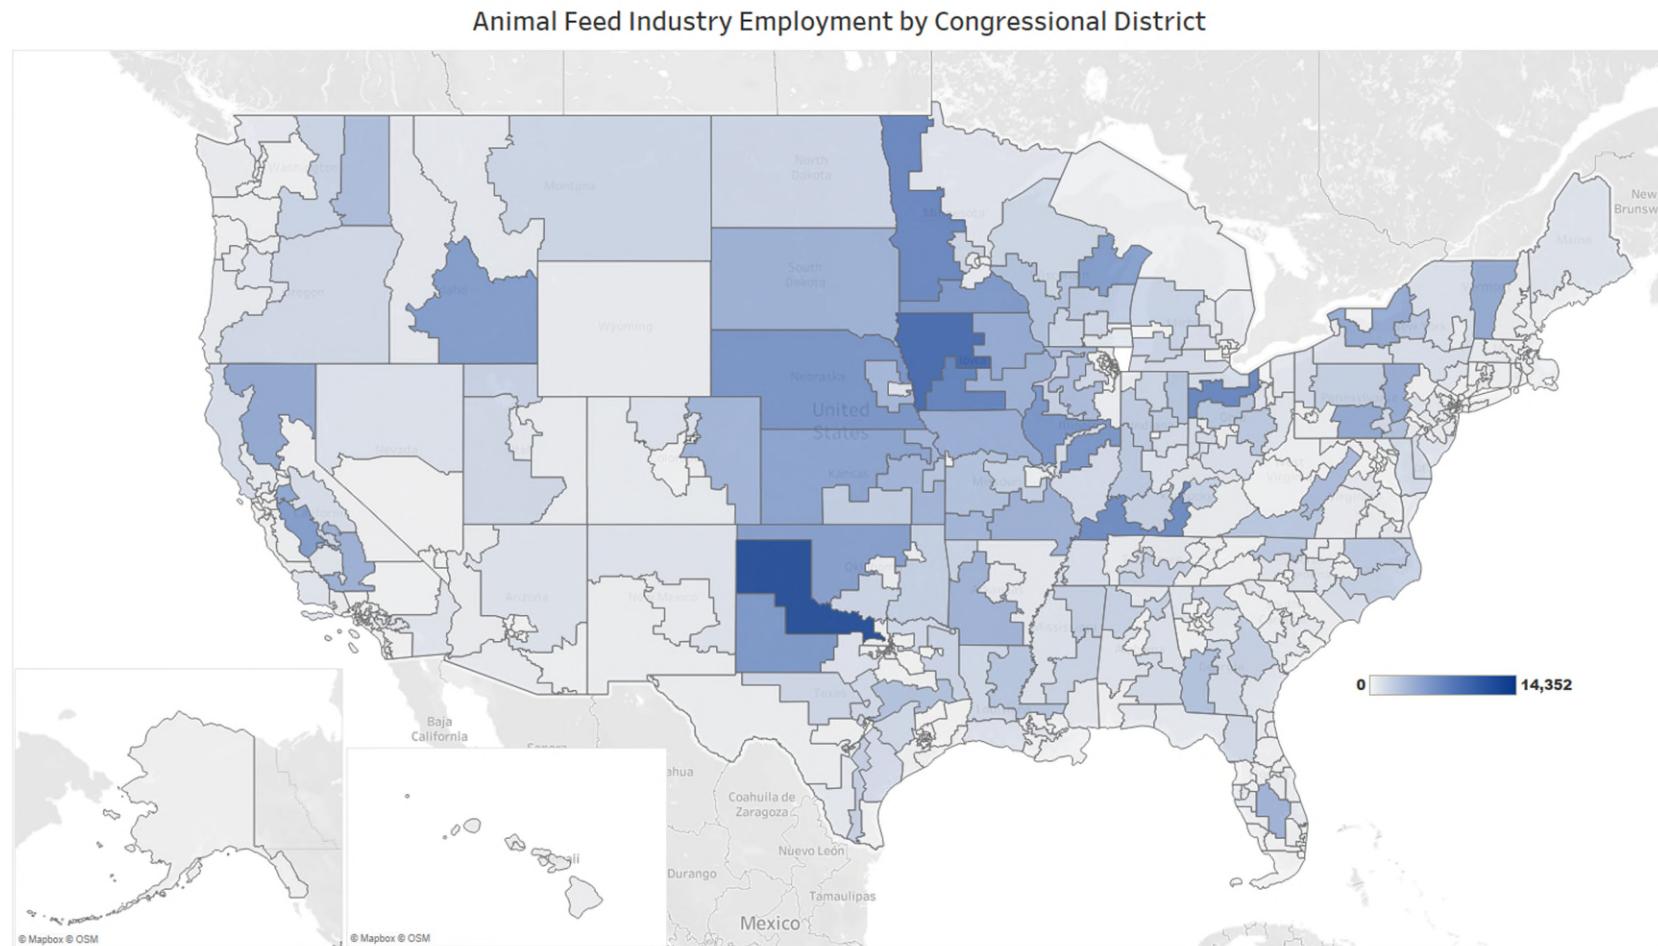

Figure 21. Animal Feed Industry Employment by Congressional District

4.5.2 Value Added

The leading U.S. congressional districts for total value added from animal feed manufacturing are Texas-13 (\$1.7 billion), Iowa-4 (\$1.4 billion), Iowa-3 (\$1.2 billion), Minnesota-7 (\$1.0 billion), and Nebraska-3 (\$1.0 billion) (Figure 22).

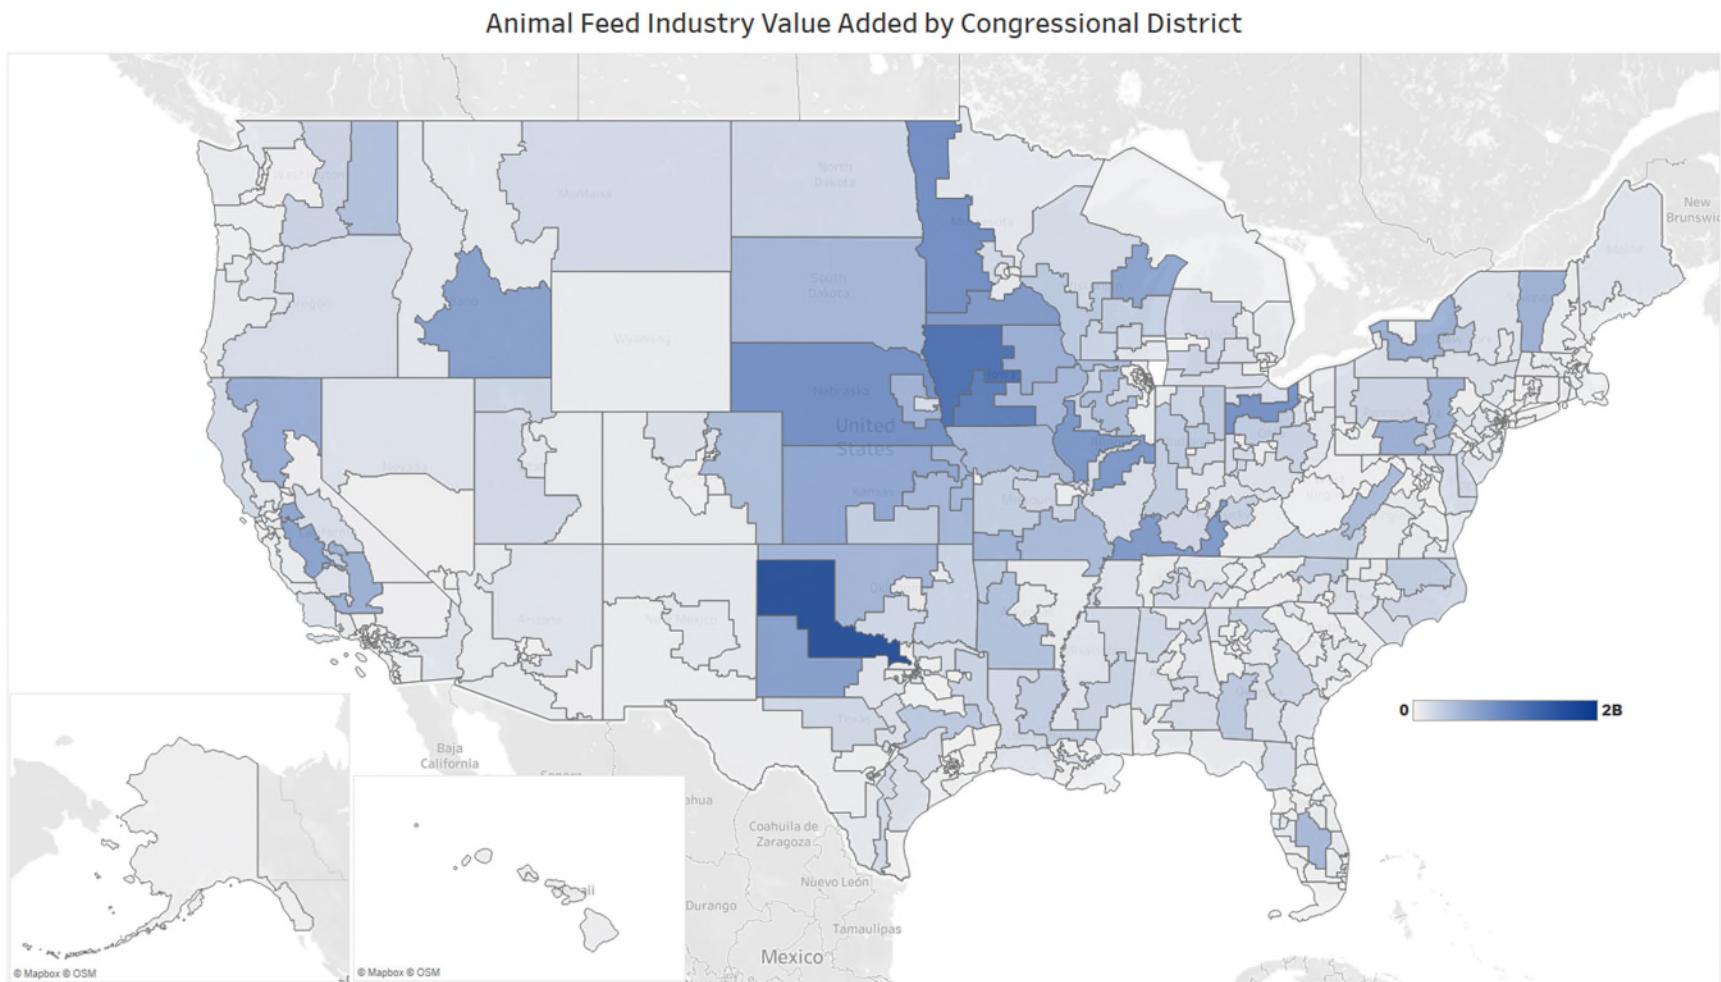

Figure 22. Animal Feed Industry Value Added by Congressional District

4.5.3 Labor Income

Figure 23 shows the estimated labor income contribution of the animal feed manufacturing industry in each U.S. congressional district. The leading congressional districts in this category are Texas-13 (\$1.3 billion), Iowa-4 (\$0.8 billion), Iowa-3 (\$0.7 billion), Minnesota-7 (\$0.6 billion), and Ohio-5 (\$0.5 billion).

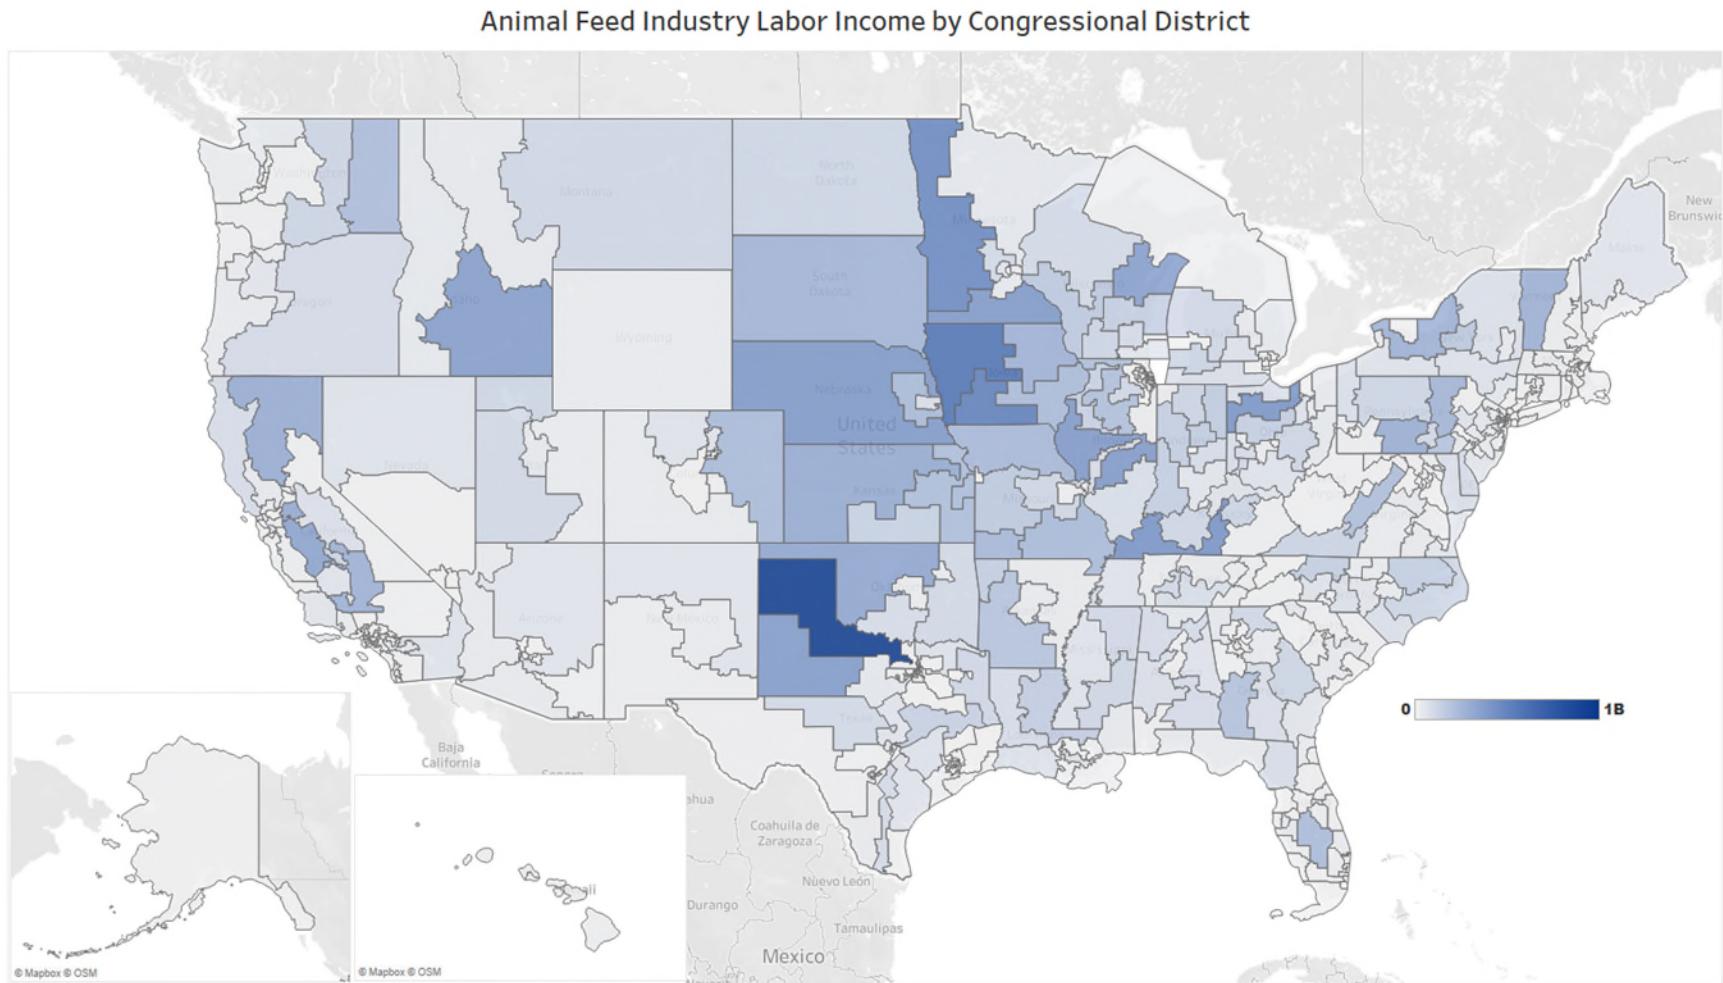

Figure 23. Animal Feed Industry Labor Income by Congressional District

4.5.4 Output

Figure 24 shows the estimated output (sales) contribution of the animal feed manufacturing industry in each U.S. congressional district. The leading congressional districts in this category are Texas-13 (\$5.2 billion), Iowa-4 (\$4.3 billion), Iowa-3 (\$2.8 billion), Minnesota-7 (\$2.8 billion), and Ohio-5 (\$2.8 billion).

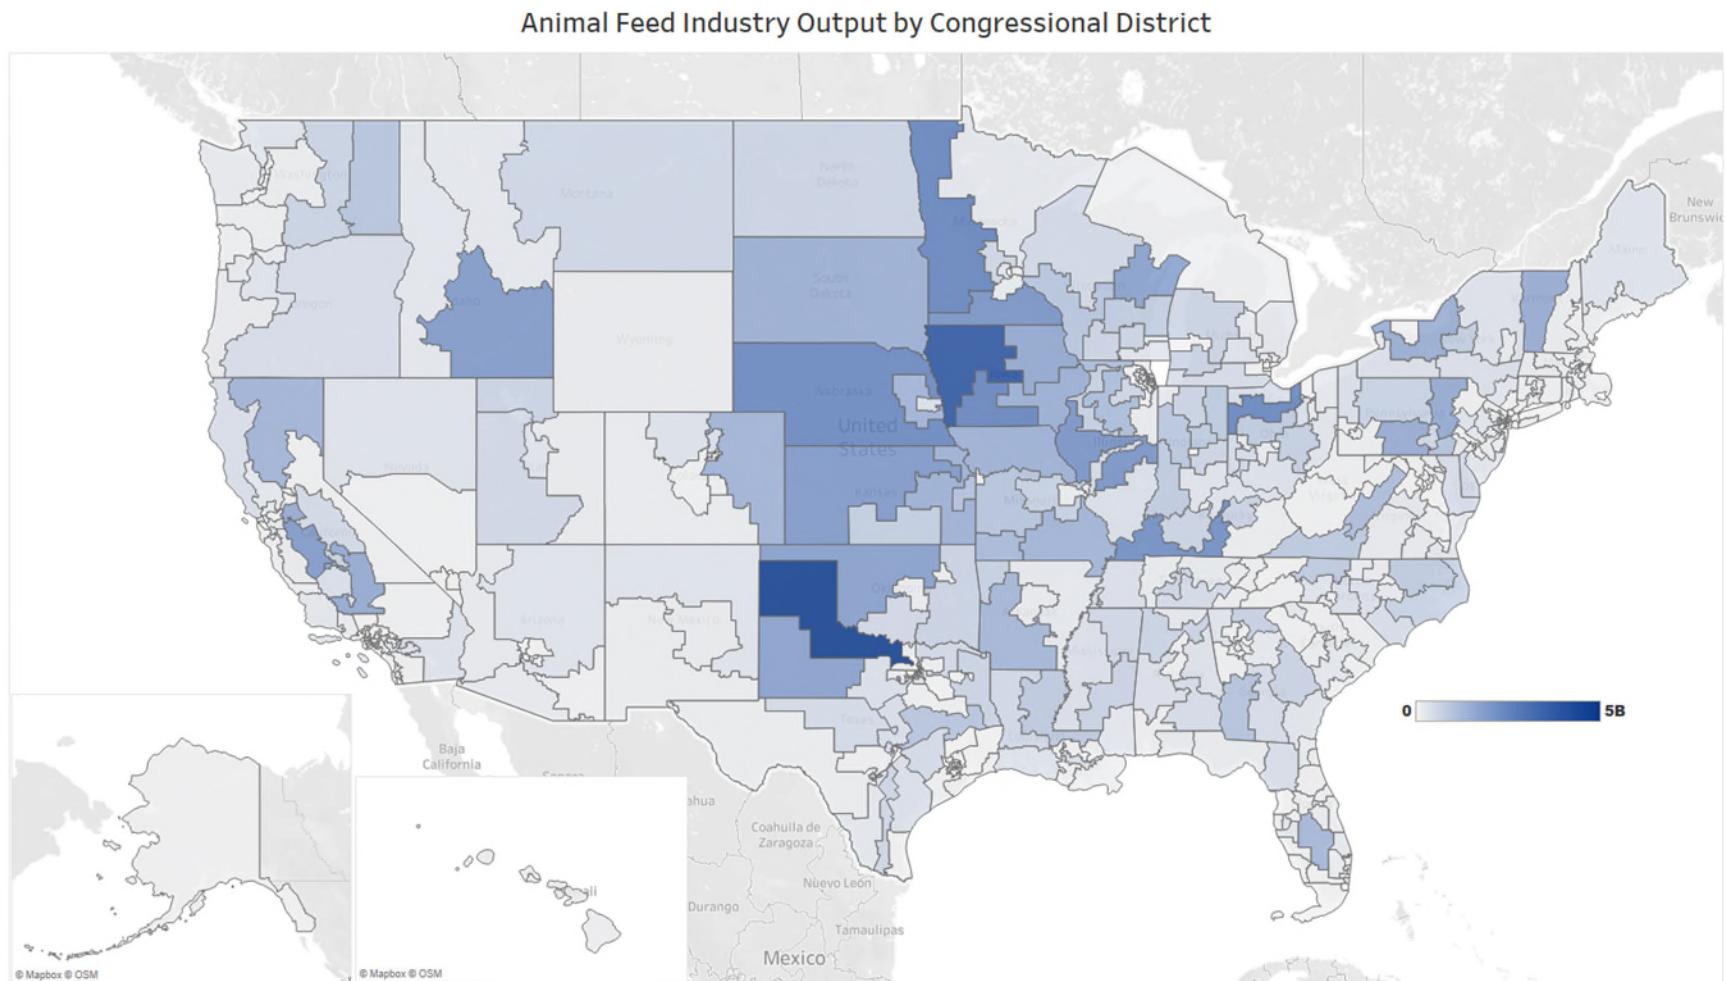

Figure 24. Animal Feed Industry Output by Congressional District

4.5.5 Taxes

The leading U.S. congressional districts for estimated taxes paid by the animal feed manufacturing industry include Texas-13 (\$305.4 million), Iowa-4 (\$299.1 million), New York-24 (\$254.7 million), Nebraska-3 (\$223.3 million), and Ohio-5 (\$213.2 million) (Figure 25).

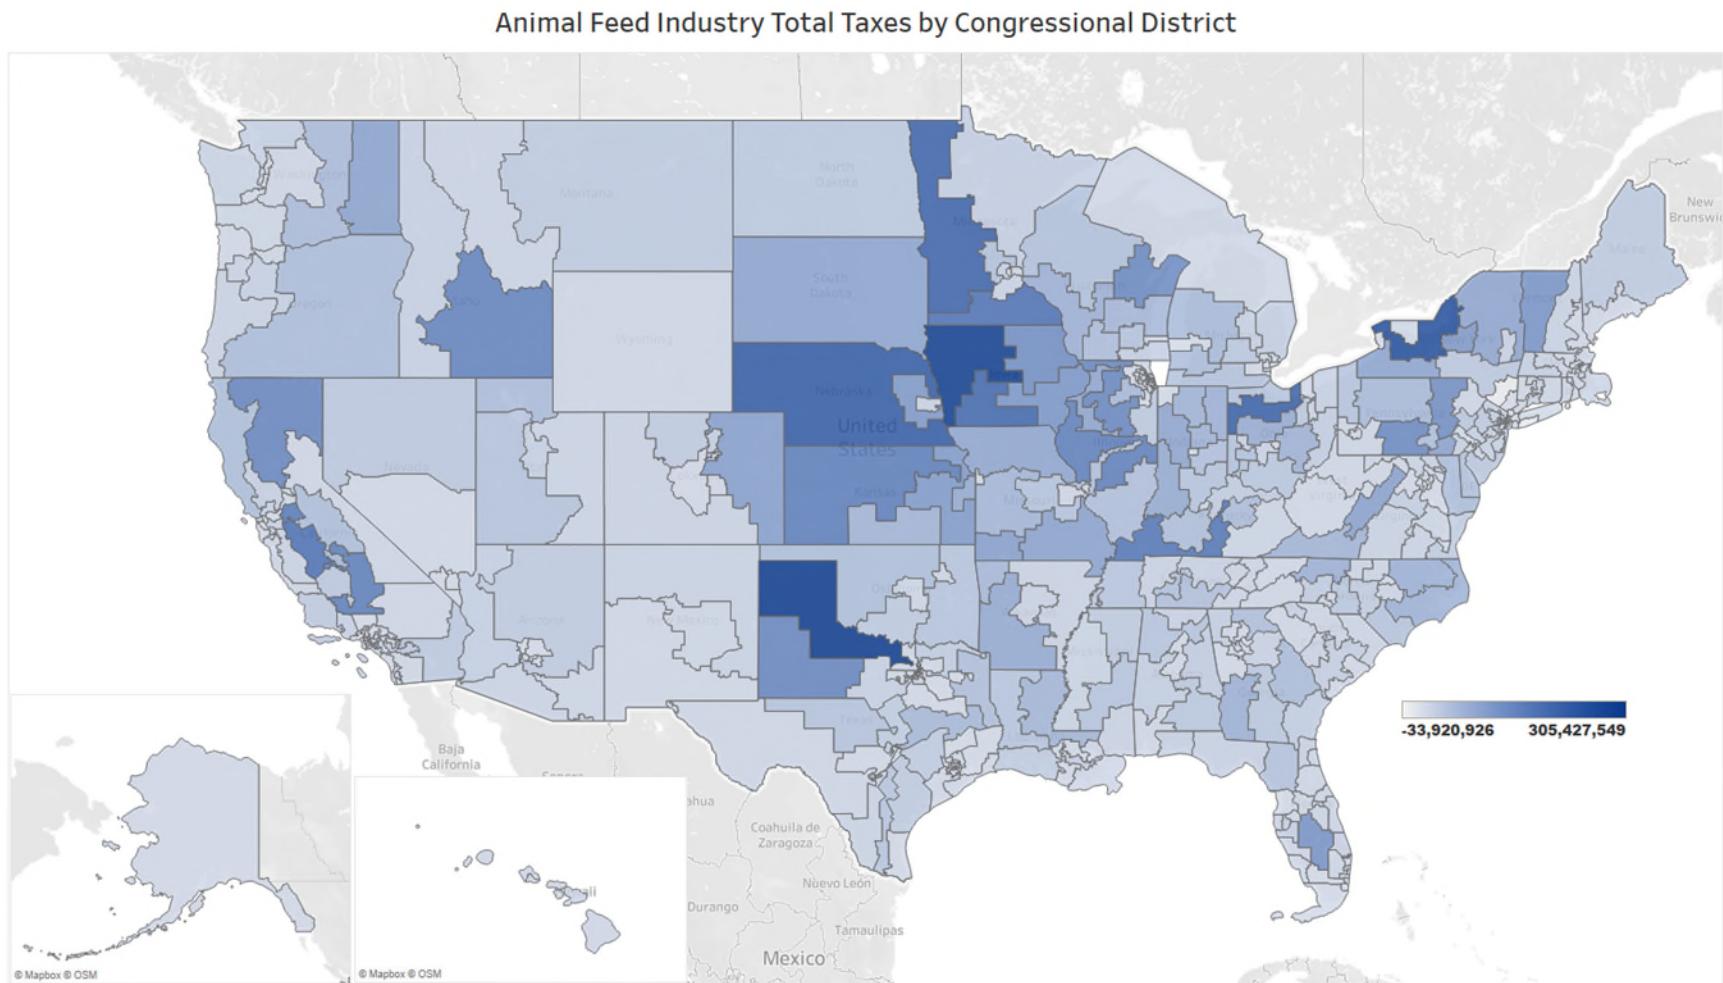

Figure 25. Animal Feed Industry Taxes by Congressional District

4.6 Pet Food Manufacturing National and State Results

The U.S. pet food manufacturing industry, as a subset of the total animal food industry, is estimated to directly contribute the following to the national economy:

- \$10.8 billion in value added, including \$2.9 billion in labor income
- 32,938 jobs
- \$34.5 billion in output (sales)
- \$1.6 billion in local, state, and federal taxes

Including indirect and induced effects, the **total** contribution of the U.S. pet food manufacturing industry is:

- \$40.0 billion in value added, including \$20.4 billion in labor income
- 283,736 jobs
- \$102.3 billion in output
- \$7.4 billion in local, state, and federal taxes

Five states consistently rank at the top of all reported measures of the economic contribution of their pet food manufacturing industry: Missouri, Kansas, Pennsylvania, California, and Iowa. All five states are home to many pet food manufacturing facilities generating local and regional economic activity. The pet food manufacturers in these five states contribute the following **total** activity to the economy:

- \$16.9 billion in value added, including \$8.6 billion in labor income
- 116,807 jobs
- \$42.7 billion in output
- \$3.1 billion in local, state, and federal taxes

4.6.1 Jobs

At the national level, the pet food manufacturing industry contributes an estimated 283,736 jobs within and related to this industry. Figure 26 shows the estimated jobs contribution by state. The top five states in this category are Missouri, Kansas, Pennsylvania, California, and Iowa. These states all have dozens of pet food manufacturing facilities generating economic activity, ranging from 18 in Iowa to 59 in Pennsylvania.

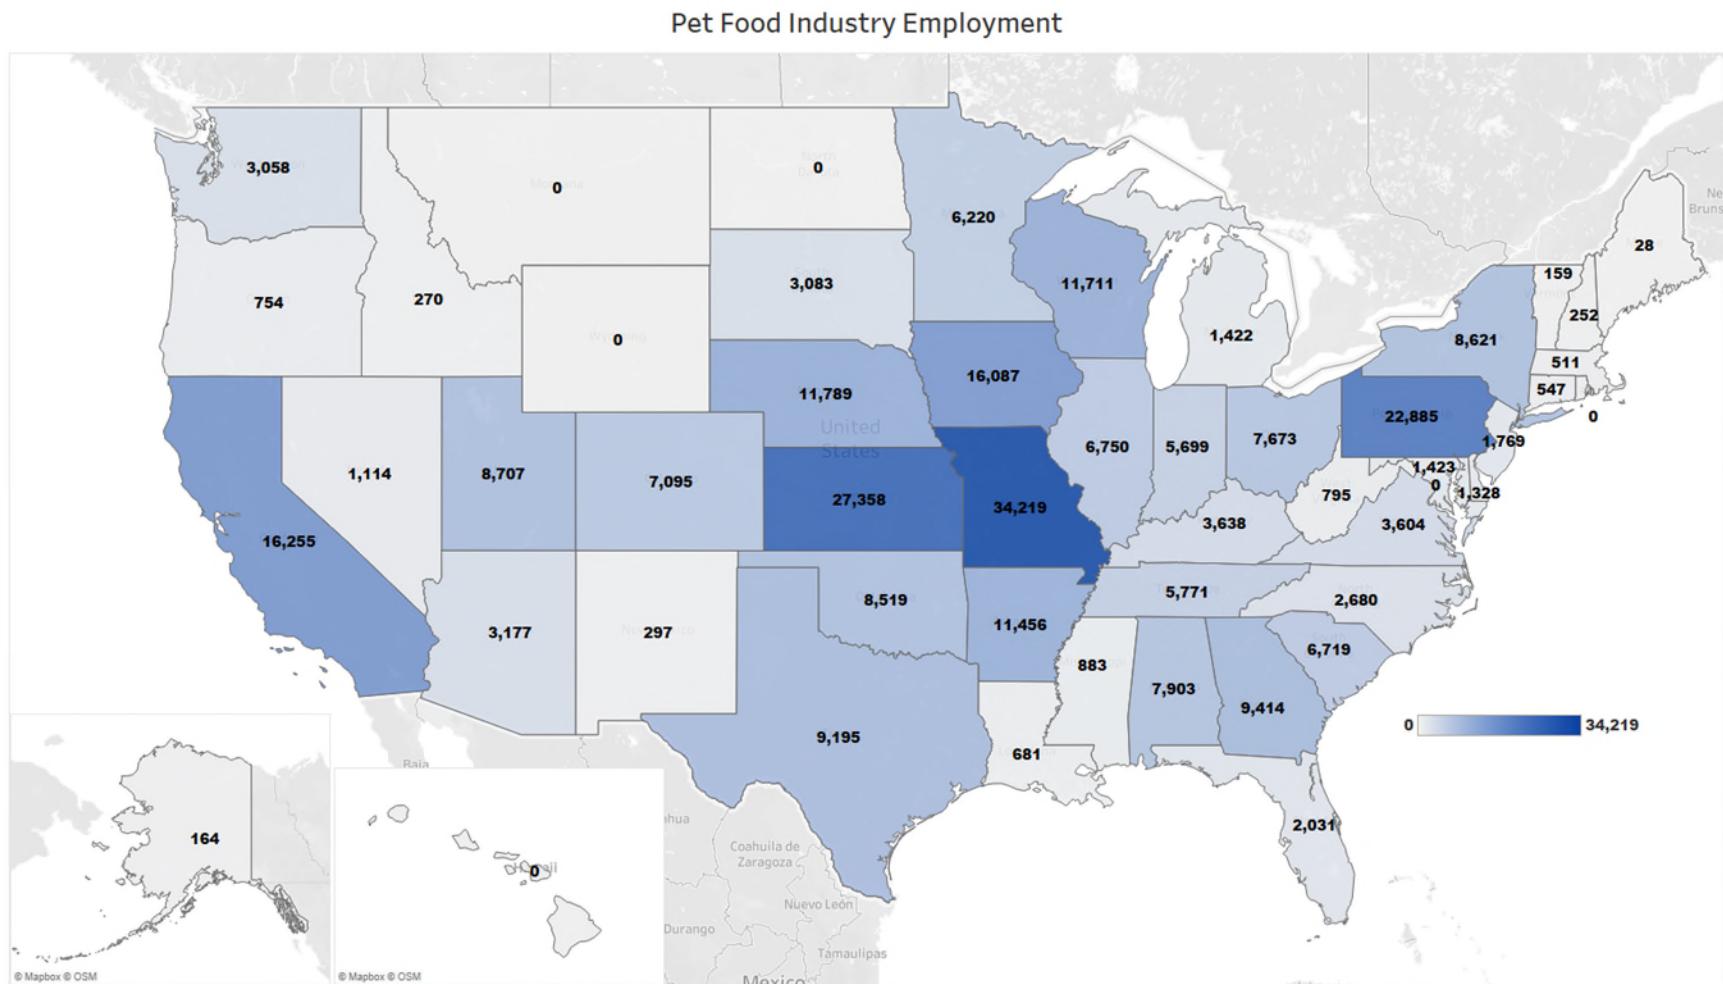

Figure 26. Pet Food Industry Employment by State

4.6.2 Value Added

The pet food manufacturing industry contributes an estimated \$40.0 billion in total value added across the United States. Figure 27 shows the estimated value-added contribution by state. The top five states in this category are Missouri (\$5.0 billion), Kansas (\$4.3 billion), Pennsylvania (\$3.2 billion), Iowa (\$2.3 billion), and California (\$2.3 billion).

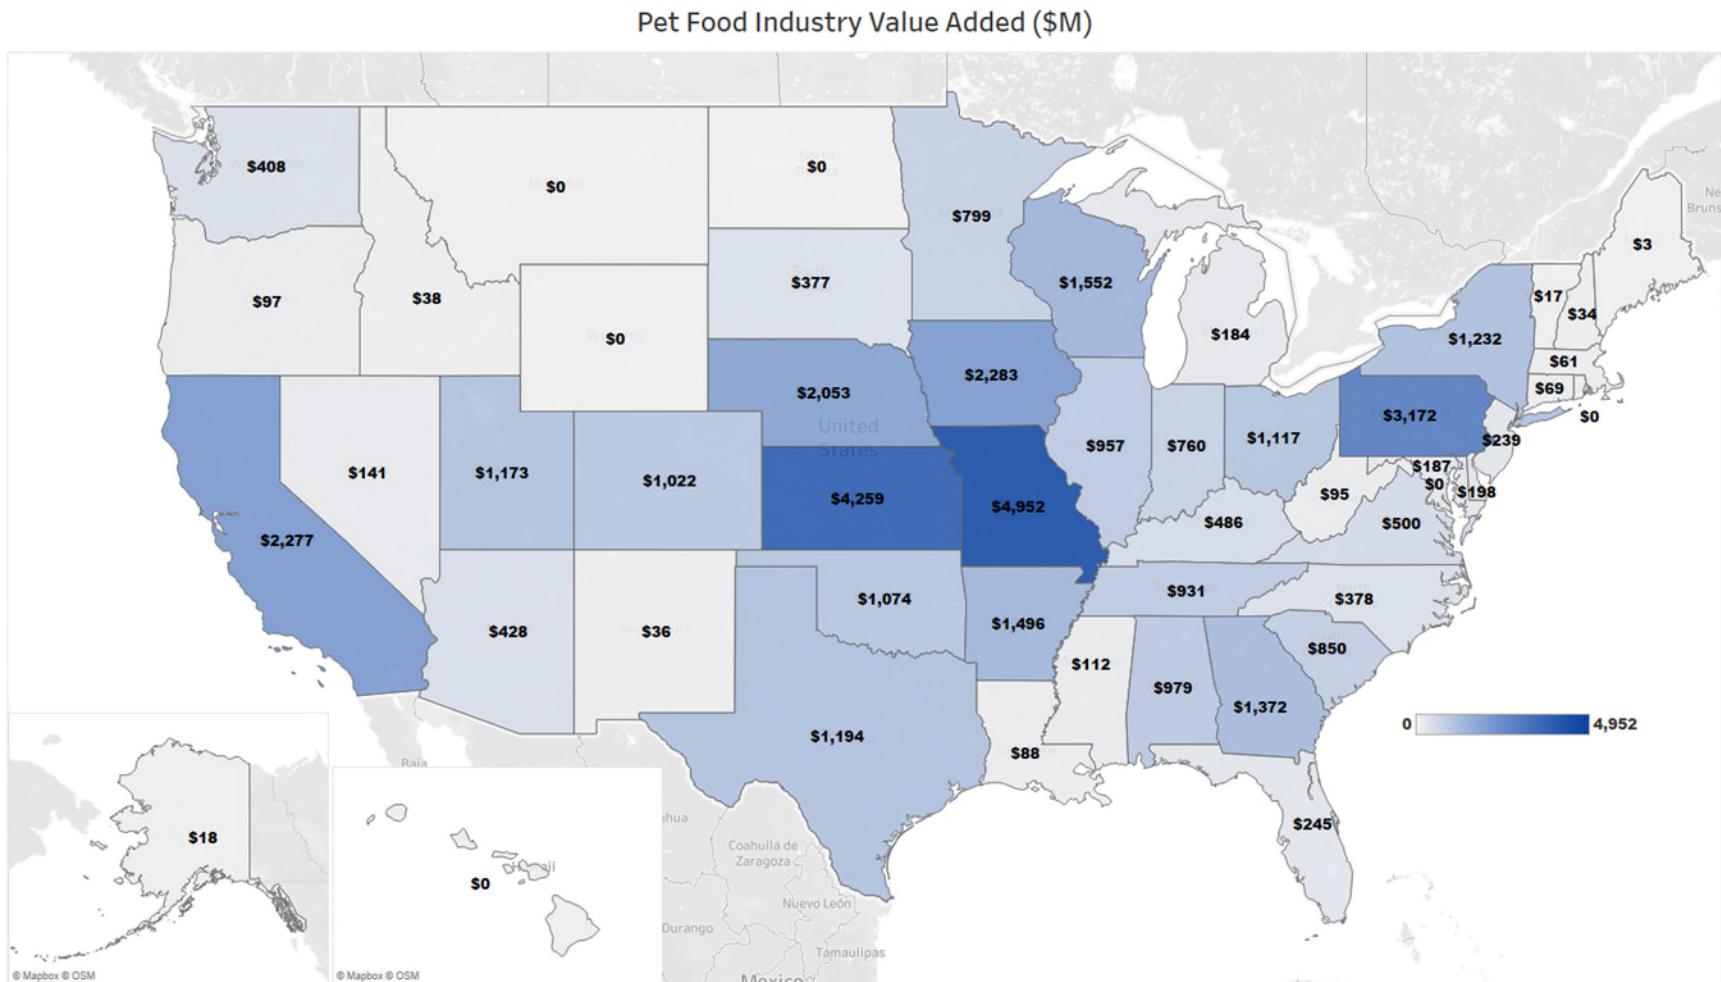

Figure 27. Pet Food Industry Value Added by State

4.6.3 Labor Income

At the national level, the pet food manufacturing industry contributes an estimated \$20.4 billion in total labor income within and related to this industry. Figure 28 shows the labor income contribution by state. The top five states (Missouri, Kansas, Pennsylvania, Iowa, and California) have an estimated total labor income contribution of more than \$1 billion, with Missouri leading the way at \$2.5 billion.

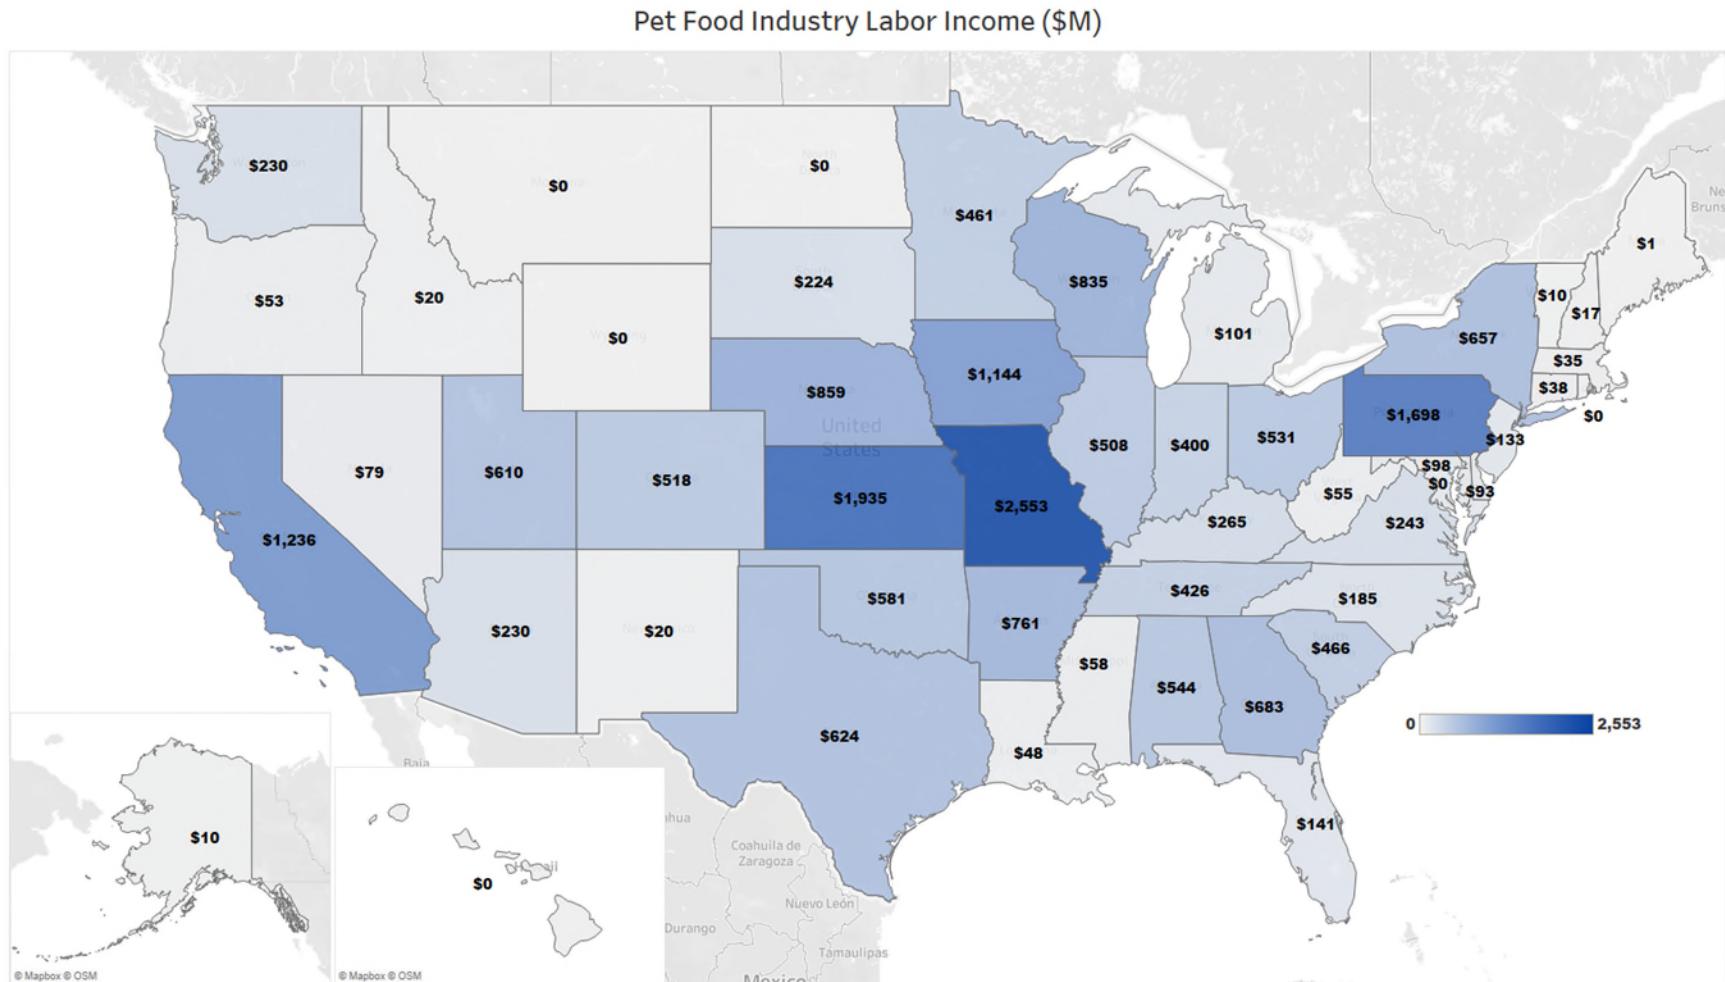

Figure 28. Pet Food Industry Labor Income by State

4.6.4 Output

The pet food manufacturing industry contributes an estimated \$102.3 billion in total output across the United States. Figure 29 shows the estimated output contribution by state. Both Kansas and Missouri have an estimated output contribution of more than \$10.0 billion.

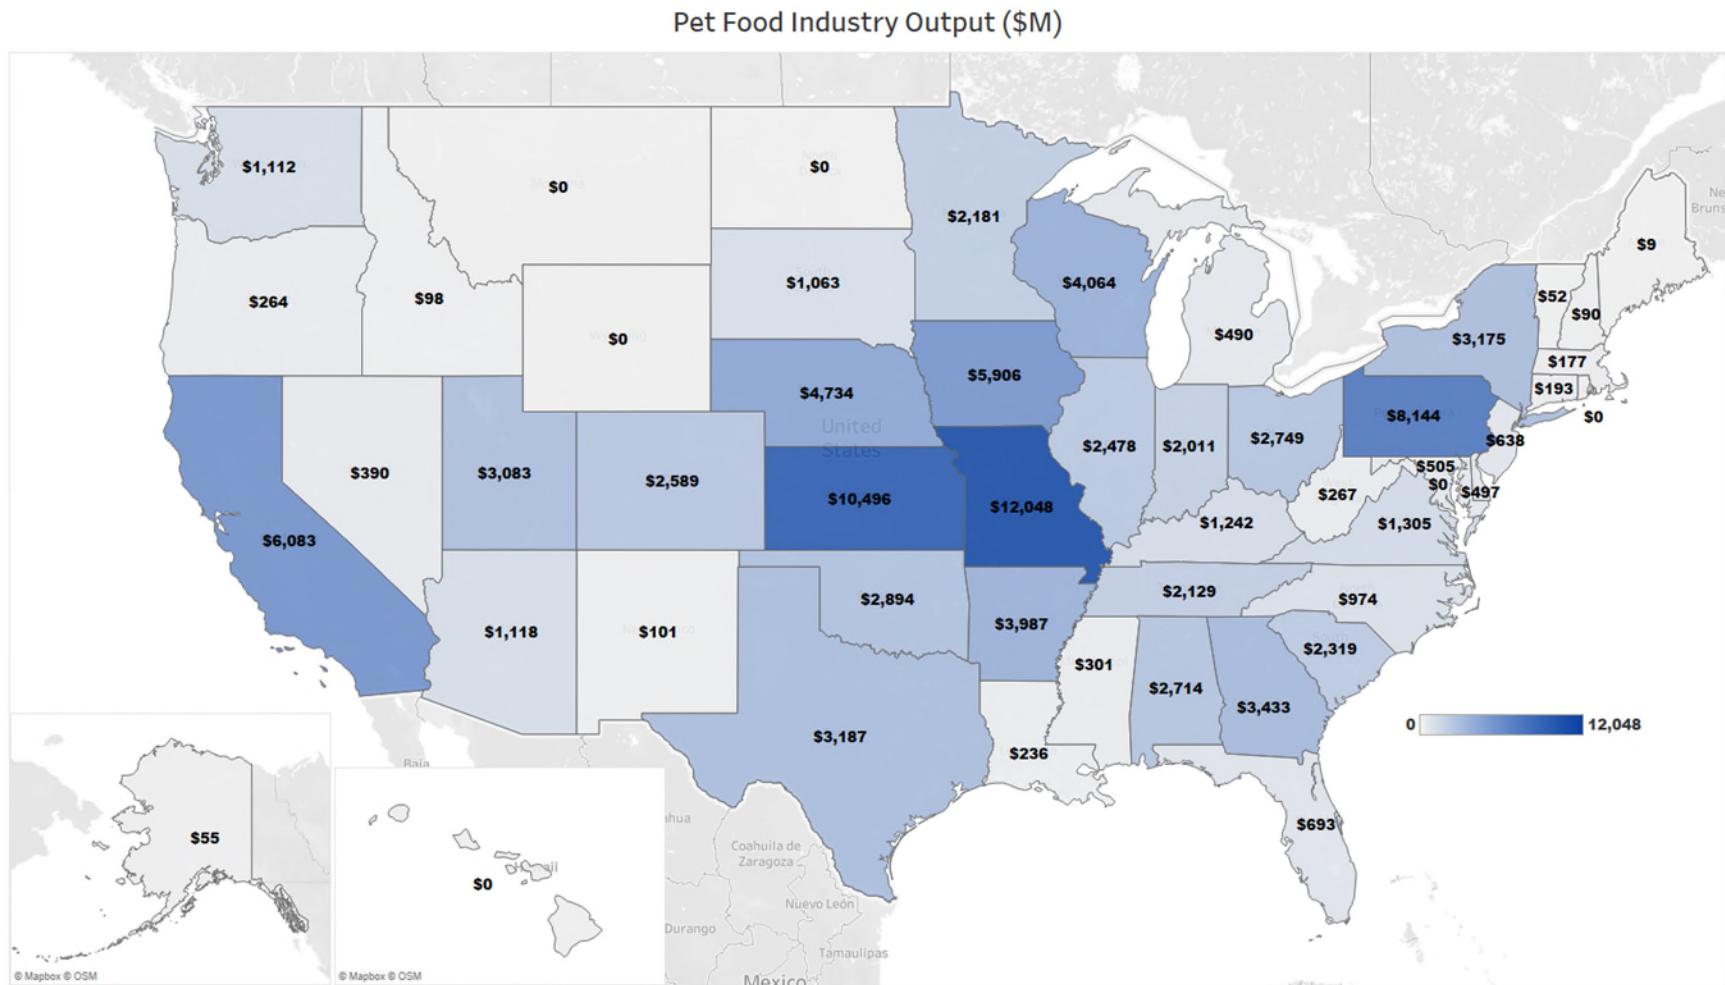

Figure 29. Pet Food Industry Output by State

4.6.5 Taxes

The economic activity associated with the pet food manufacturing industry is estimated to generate a net total of \$7.4 billion in local, state, and federal taxes. The estimated tax contribution by state is shown in Figure 30.

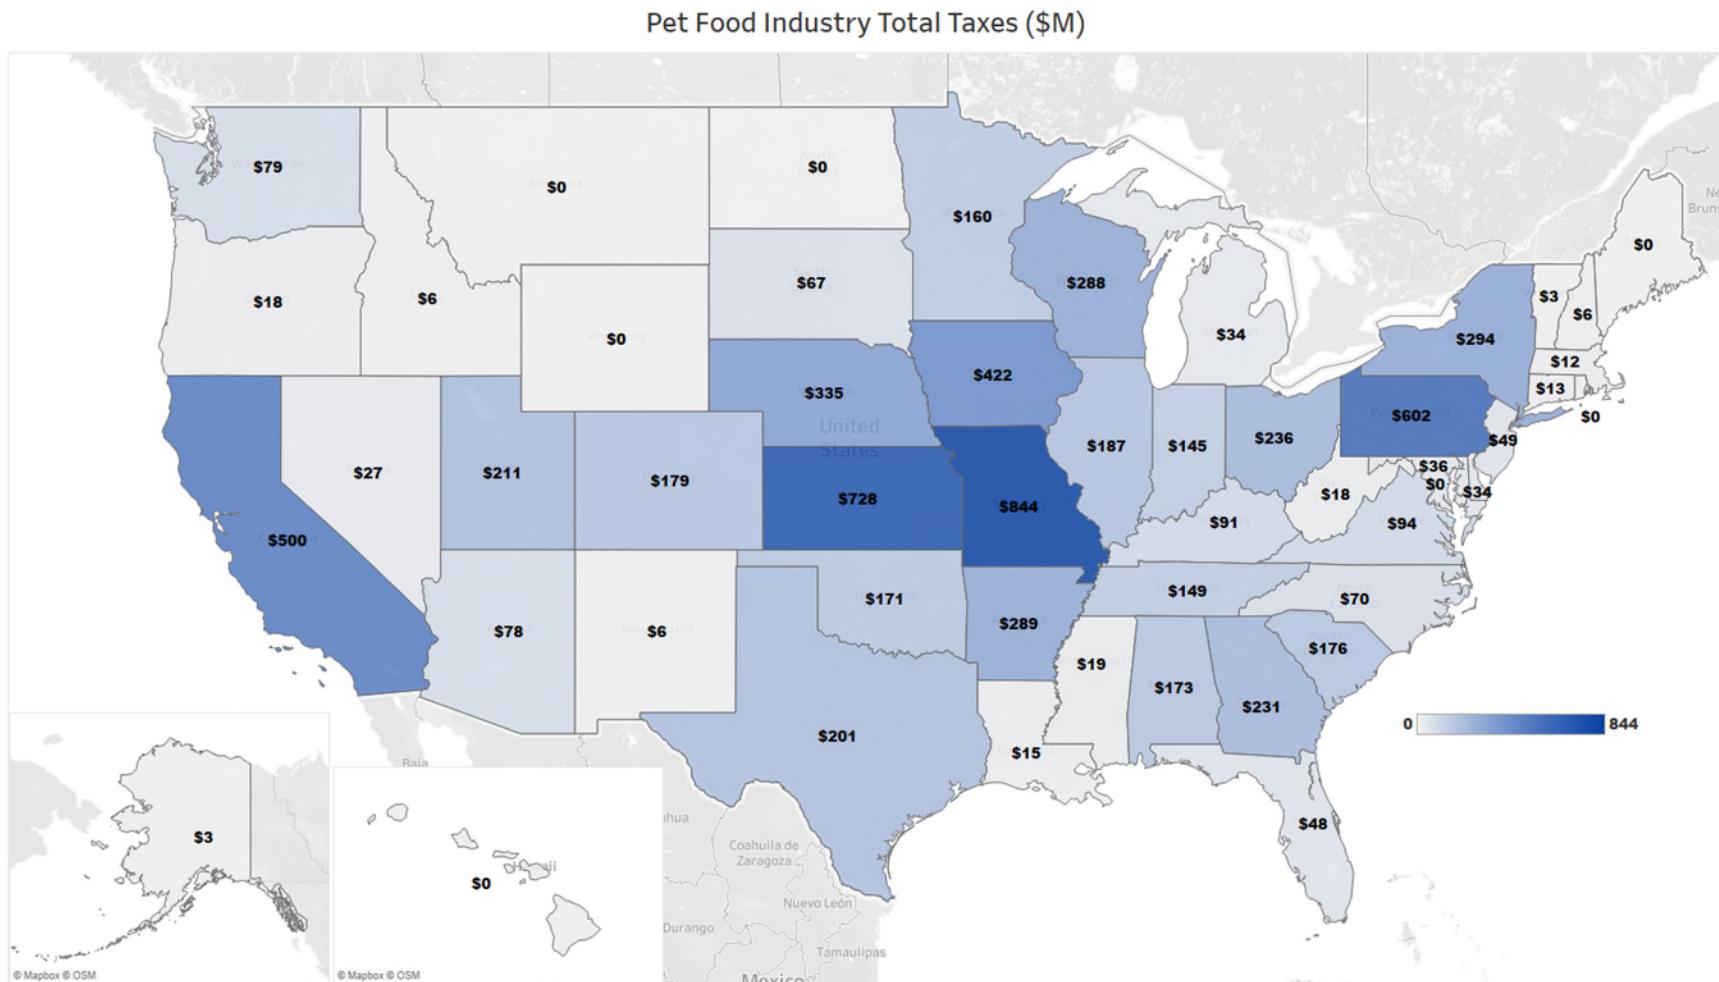

Figure 30. Pet Food Industry Total Taxes by State

4.7 Pet Food Congressional District Results

4.7.1 Jobs

Figure 31 shows the 2023 U.S. federal congressional districts in terms of the total jobs contributed by that district's pet food manufacturing industry. The districts with the most jobs contributed include Kansas-2 (19,267), Missouri-7 (11,342), Missouri-1 (7,632), Pennsylvania-7 (7,492), and Nebraska-3 (7,083).

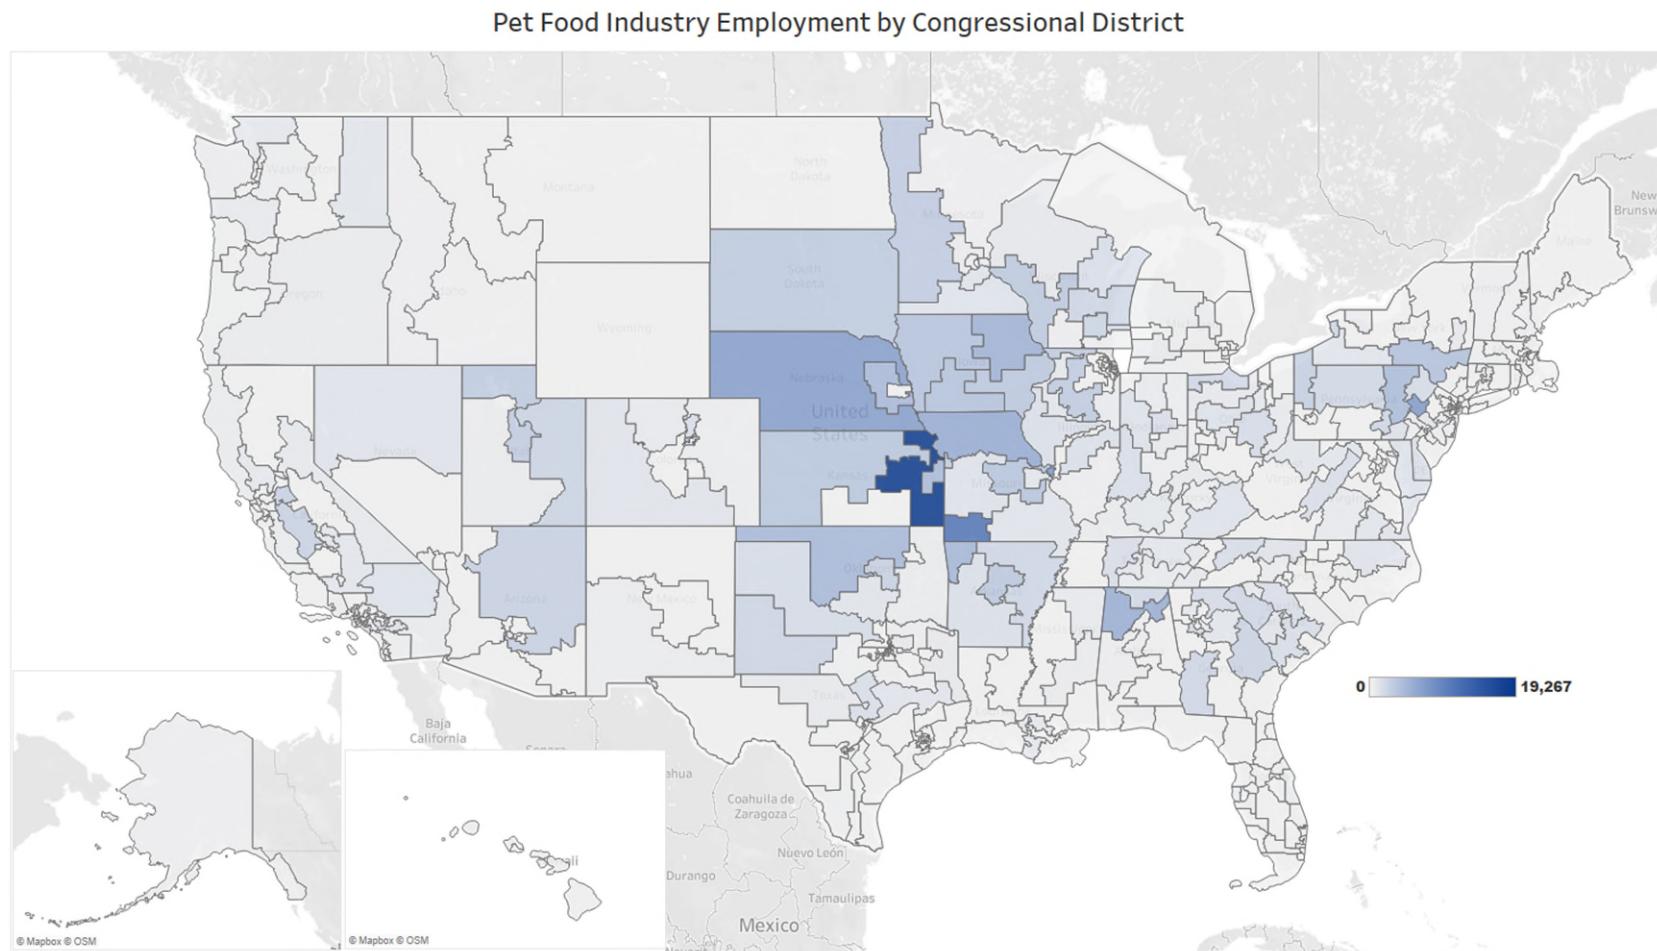

Figure 31. Pet Food Industry Employment by Congressional District

4.7.2 Value Added

Figure 32 shows the 2023 U.S. federal congressional districts in terms of the total value-added contribution of that district's pet food manufacturing industry. Five districts have an estimated contribution in this category of more than \$1.0 billion: Kansas-2 (\$2.9 billion), Missouri-1 (\$1.8 billion), Missouri-7 (\$1.3 billion), Nebraska-3 (\$1.2 billion), and Pennsylvania-7 (\$1.1 billion).

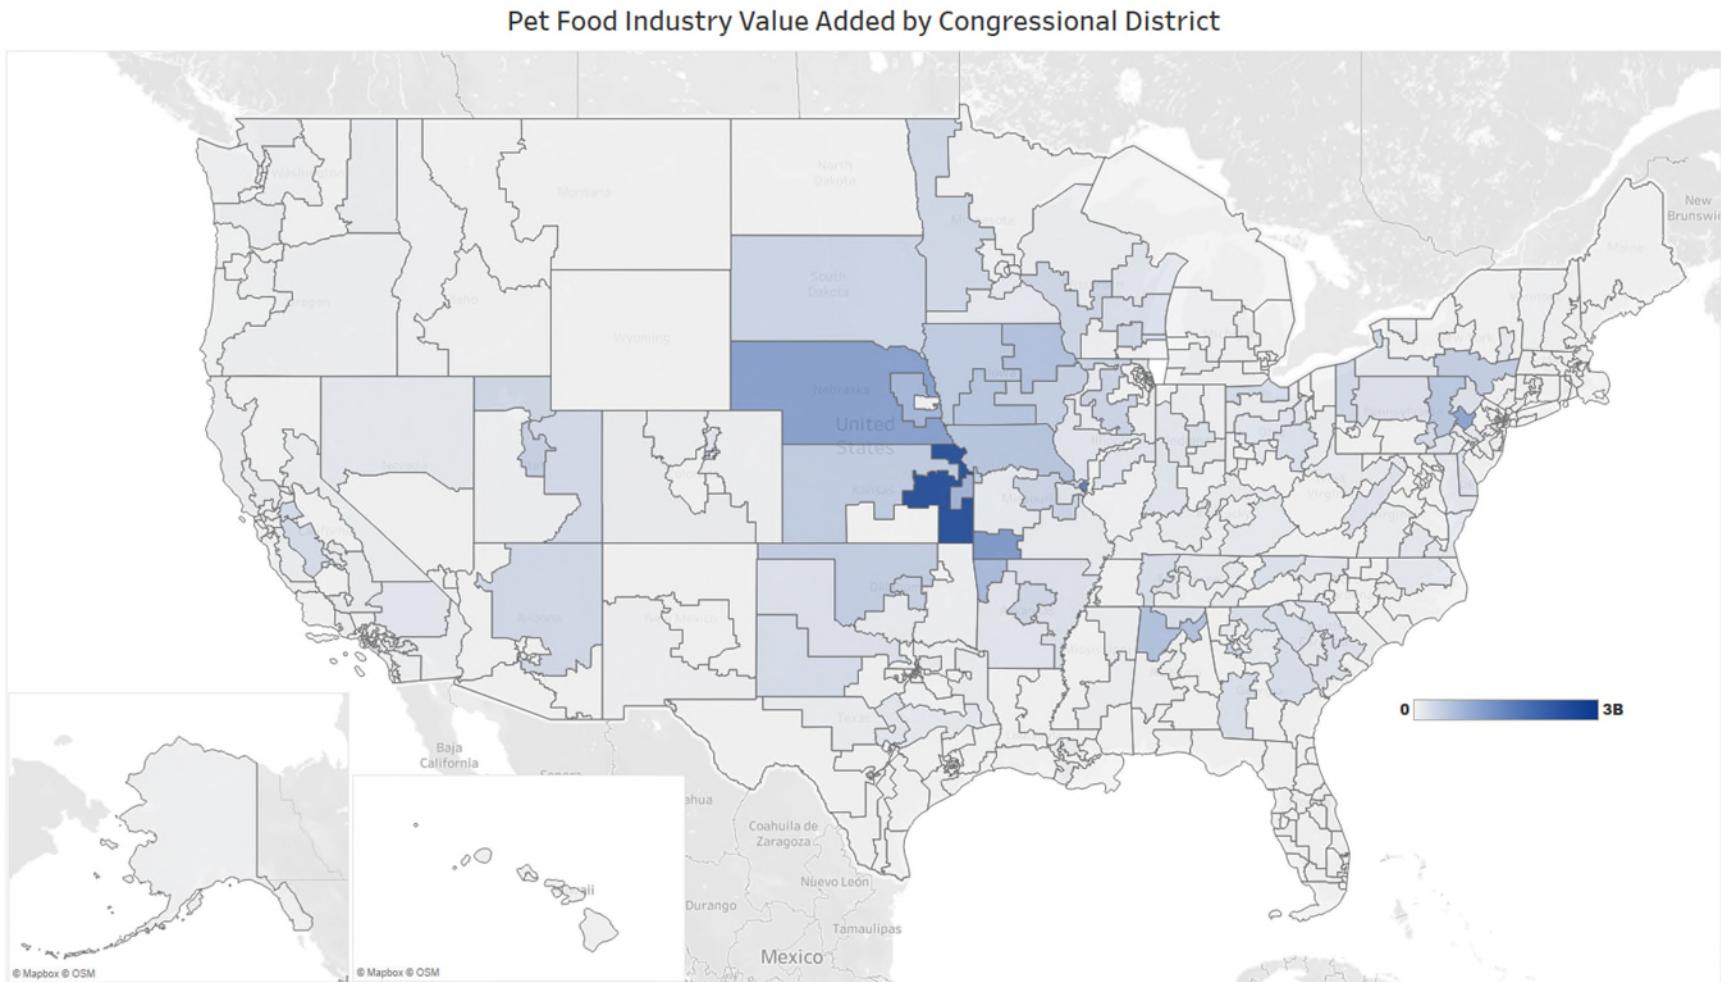

Figure 32. Pet Food Industry Value Added by Congressional District

4.7.3 Labor Income

The leading congressional districts in terms of their estimated labor income contribution are Kansas-2 (\$1.3 billion), Missouri-1 (\$0.8 billion), Missouri-7 (\$0.7 billion), Pennsylvania-7 (\$0.6 billion), and Nebraska-3 (\$0.5 billion) (Figure 33).

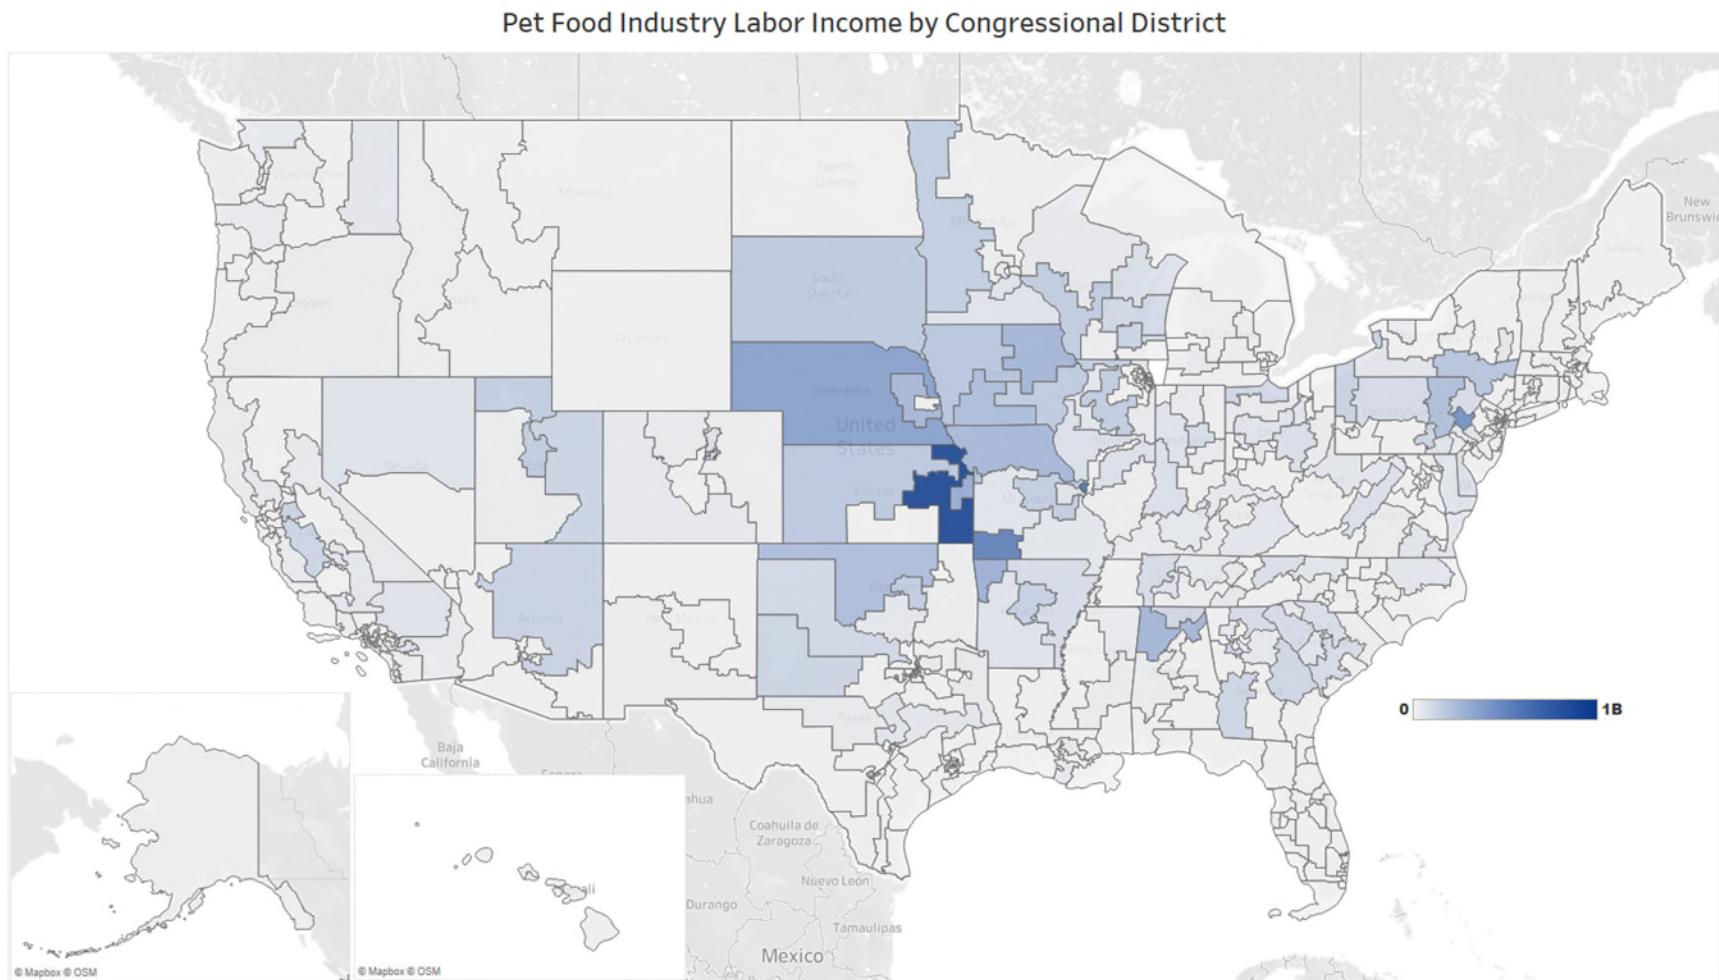

Figure 33. Pet Food Industry Labor Income by Congressional District

4.7.4 Output

Figure 34 shows the estimated output (sales) contribution of the pet food manufacturing industry in each U.S. congressional district. As with other indicators in this section, the leading congressional districts in this category are Kansas-2 (\$7.4 billion), Missouri-1 (\$3.6 billion), Missouri-7 (\$3.3 billion), Nebraska-3 (\$2.9 billion), and Pennsylvania-7 (\$2.5 billion).

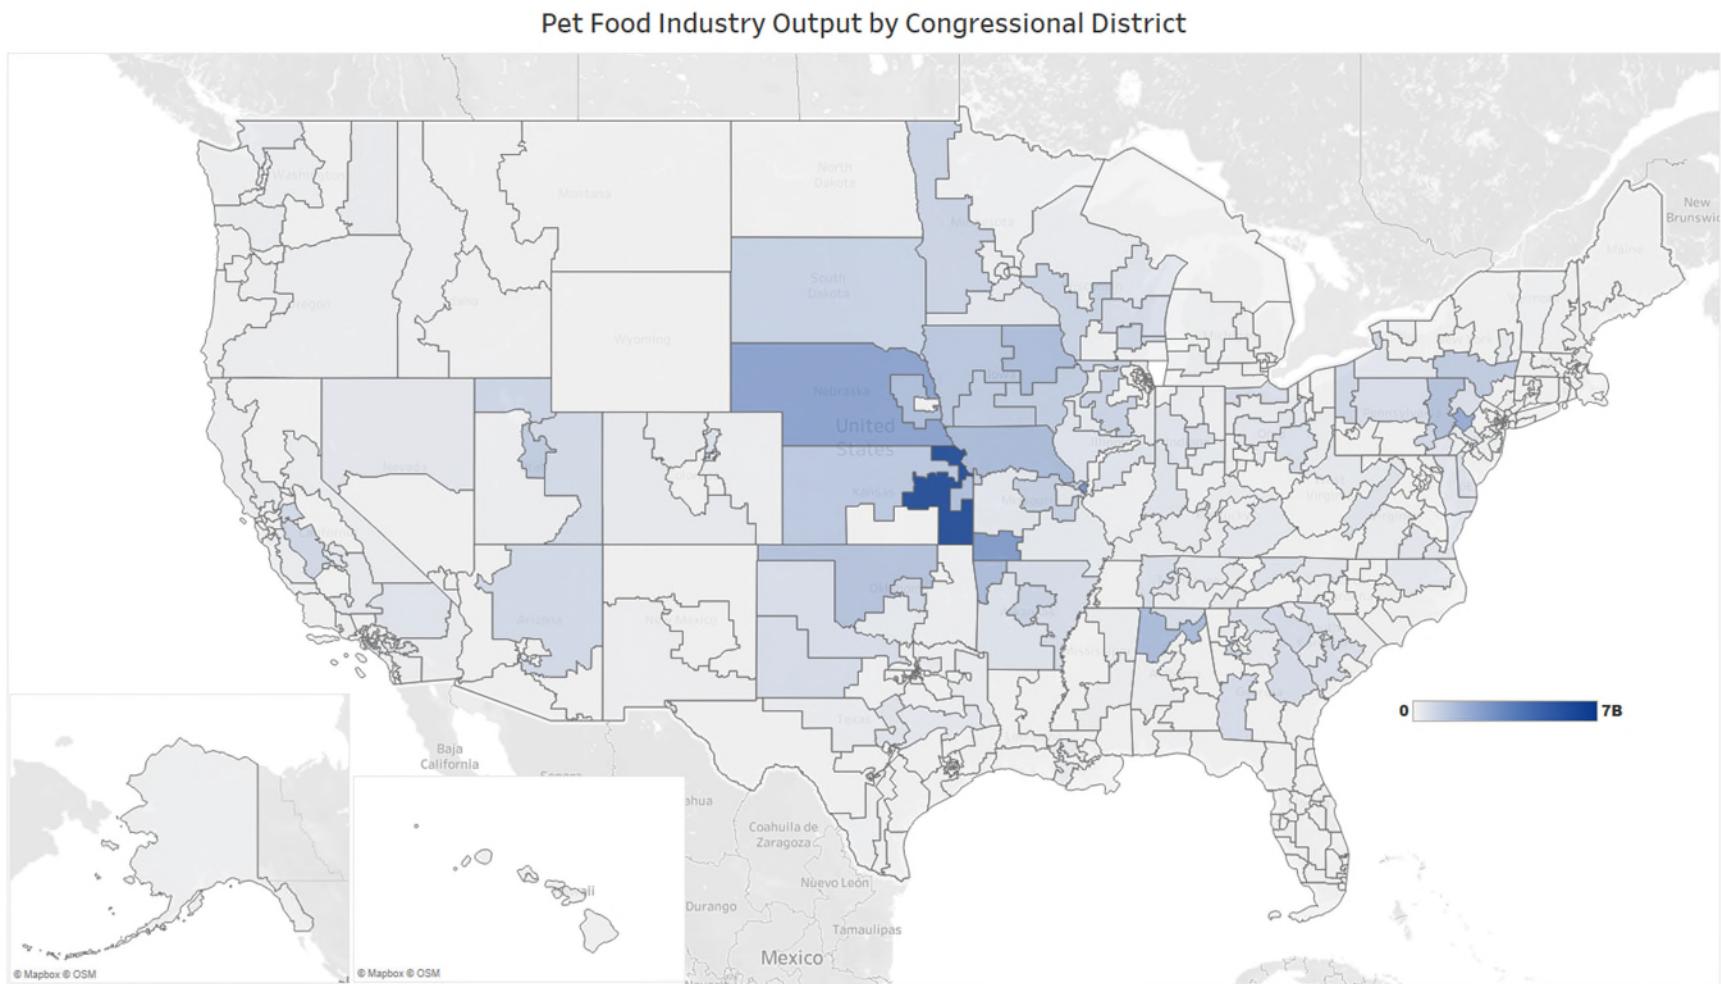

Figure 34. Pet Food Industry Output by Congressional District

4.7.5 Taxes

The leading U.S. congressional districts for estimated taxes paid by the animal feed manufacturing industry include Kansas-2 (\$534.4 million), Missouri-6 (\$360.7 million), Iowa-3 (\$247.9 million), Pennsylvania-7 (\$221.3 million), and Nebraska-3 (\$205.1 million) (Figure 35).

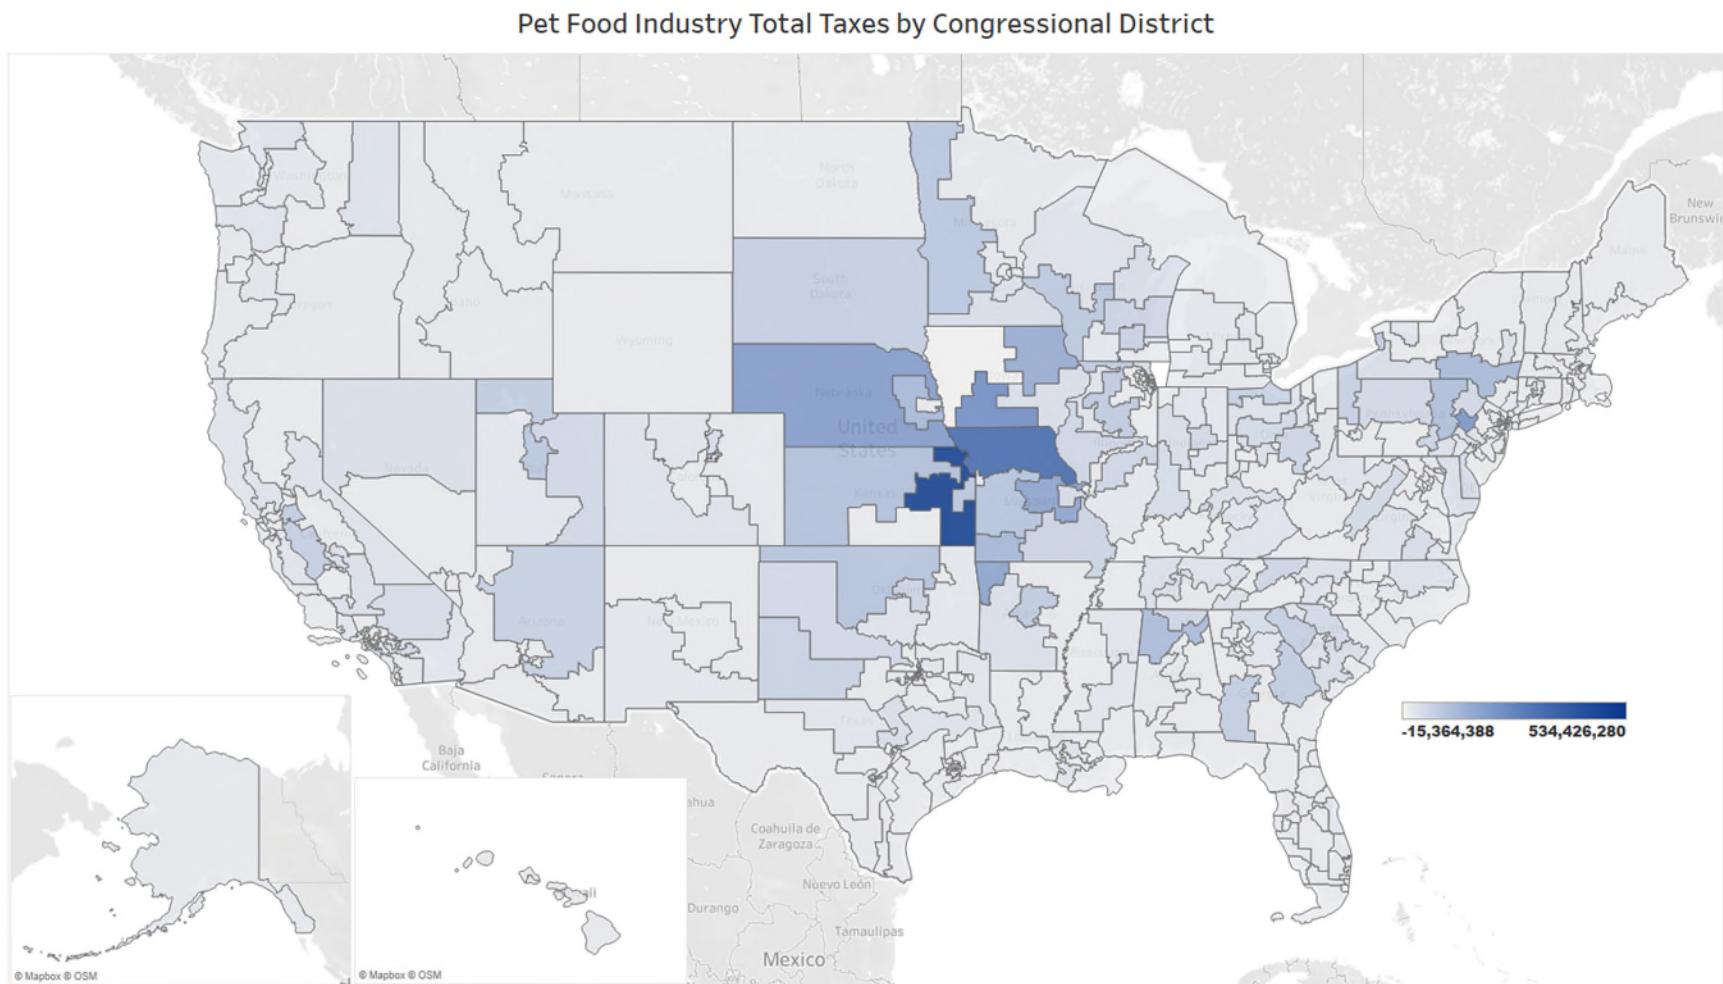

Figure 35. Pet Food Industry Total Taxes by Congressional District

5 Research Implications/Suggestions for Further Research

5.1 Challenges and Opportunities

The animal food industry continues to evolve and adapt to meet challenges such as changing market conditions, supply chain disruptions, consumer preferences, regulatory hurdles, and environmental concerns.

The COVID-19 pandemic impacted the whole economy, including the animal agriculture and animal food industries. In some cases, the closing of slaughter facilities in March 2020 in the United States increased feed use, as animals could not go to slaughter and thus remained on feed longer. In other cases, such as the hog industry, reduced farrowing due to pandemic concerns reduced future feed use. In a previous DIS study,⁵ it was concluded that the pandemic had an overall negative effect on feed consumption and the total value of feed consumed.

The poultry industry experienced the worst outbreak in U.S. history of highly pathogenic avian influenza (HPAI) in 2022. As of April 2023, 58.8 million birds in 47 states had been affected by the outbreak which has continued into 2023. The only states yet to report cases are Hawaii, Louisiana, and West Virginia. This HPAI outbreak has lasted much longer than the 2015 HPAI outbreak which lasted less than a year, stretching from December 2014 to June 2015. A total of 50.4 million birds were affected in 15 different states, primarily in the Midwest and west. After the outbreak concluded, the flock rebuilt itself to previous levels in about nine months. The first case of the 2022-23 outbreak was reported in February 2022 and cases are still being identified as of April 2023. It is not yet clear if this outbreak of HPAI will end, or if HPAI is a disease that the industry will have to continuously combat.

The U.S. beef herd has been shrinking since 2019 and drought conditions across the country, especially across the Great Plains, have worked to continue this trend. On Jan. 1, 2019, the U.S. had 31.7 million beef cows, but on Jan. 1, 2023, this number had decreased to 28.9 million head, although 2023 could be a turning point for U.S. cattle inventory as strong fed cattle and feeder cattle prices could stimulate heifer retention and rebuilding of the breeding herd.

African swine fever (ASF) has impacted many hogs across the world. China was severely impacted by the disease and battled ASF from 2019-21. Though the deadly swine disease was confirmed in the Dominican Republic and Haiti, the disease has not made it to the U.S.

While challenges continue to face animal agriculture, the industry has continued to adapt to overcome all challenges and remain economically sustainable. Opportunities continue to exist for industry growth. Per capita chicken consumption continues to grow, per capita beef consumption has leveled out, per capita pork consumption is at the upper end of historical levels, and per capita turkey consumption is relatively consistent with historical norms (Figure 36).

⁵ <http://www.decision-innovation.com/webres/File/docs/210525%20IFEEDER%20Animal%20Feed-Food%20Consumption%20COVID-19.pdf>

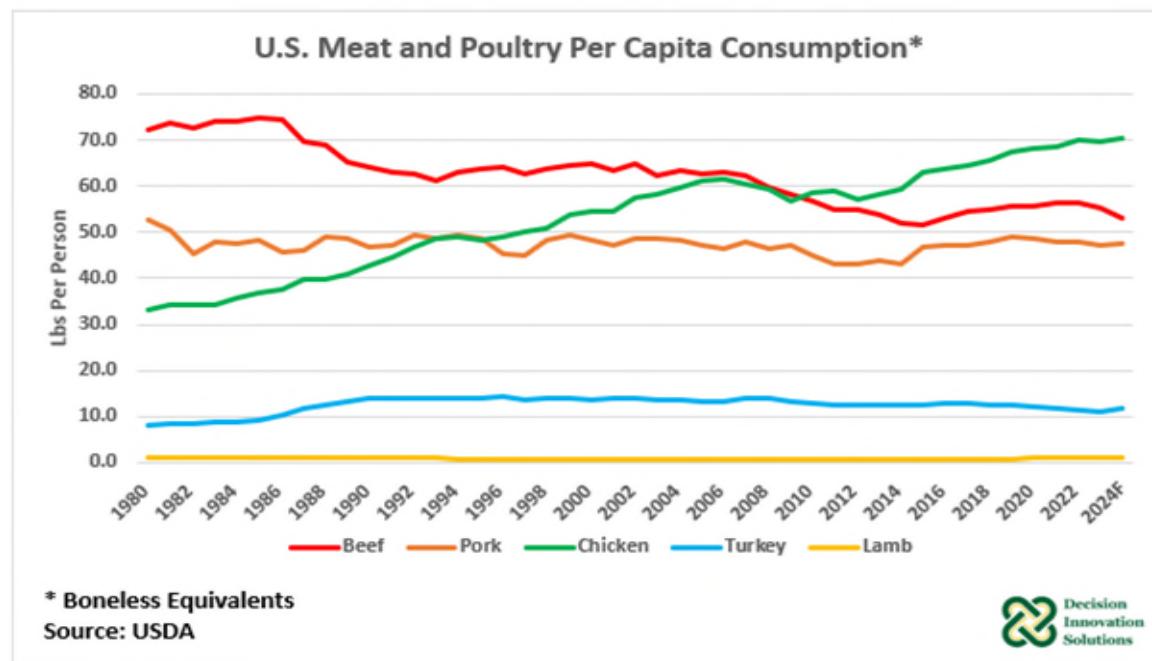

Figure 36. U.S. Meat and Poultry Per Capita Consumption

In addition to the demand that comes from these food markets, consumer demand for organic food production will likely continue to increase. Additional organic feeds to support organic animal product production would be needed to meet this demand. Following this trend, the organic pet food market is likely to grow as well, providing more incentive for identity preservation along the supply chain.
